Bush Hog Web Page

©2019 Alamo Group Inc.
In order to reduce accidents and enhance the safe operation of mowers, Alamo Group Ag Division, in cooperation with other industry manufacturers has developed the AEM/FEMA Industrial and Agricultural Mower Safety Practices video and guide book.

The video will familiarize and instruct mower-tractor operators in safe practices when using industrial and agricultural mowing equipment. It is important that Every Mower Operator be educated in the operation of their mowing equipment and be able to recognize the potential hazards that can occur while operating a mower. This video, along with the mower operator’s manual and the warning messages on the mower, will significantly assist in this important education.

Your Authorized Bush Hog Dealer may have shown this video and presented you a DVD Video when you purchased your mower. If you or any mower operator have not seen this video, Watch the Video, Read this Operator’s Manual, and Complete the Video Guidebook before operating your new mower. If you do not understand any of the instructions included in the video or operator’s manual or if you have any questions concerning safety of operation, contact your supervisor, dealer or Bush Hog.

If you would like a VHS video tape of the video, please mail AEMVideo@alamo-group.com or Fax AEM VHS Video at (830) 372-9529 or mail in a completed copy of the form on the back of this page to AEM VHS Video 1502 E Walnut Street, Seguin, TX 78155. and request the VHS video version. Please include your name, mailing address, mower model and serial number.

Every operator should be trained for each piece of equipment (Tractor and Mower), understand the intended use, and the potential hazards before operating the equipment.

The information and material listed above along with this Operator’s Manual can assist you in meeting the OSHA requirement for annual operator training.

**OSHA TRAINING REQUIREMENTS**

The following training requirements have been taken from Title 29, Code of Federal Regulations Part 1928.57 (a) (6). www.osha.gov

Operator instructions. At the time of initial assignment and at least annually thereafter the employer shall instruct every employee who operates an agricultural tractor and implements in the safe operating practices and servicing of equipment with which they are or will be involved, and of any other practices dictated by the work environment.
Bush Hog will provide
one (1) AEM Mower Safety Practices Video

To the Owner/Operator/Dealer

This Operator's Manual is an integral part of the safe operation of this machine and must be maintained with the implement at all times. A Manual canister is provided on the implement where this manual can be properly stored. If you lose or damage this manual a free replacement manual can be obtained from an authorized Bush Hog dealer or by downloading the manual from the Bush Hog website www.bushhog.com

BEFORE YOU START! READ, UNDERSTAND, and FOLLOW the information provided in this manual, the AEM Mower Safety manual and the tractor operator's manual carefully to learn how to operate and service your machine properly. Failure to do so could result in personal injury to you and bystanders. All implements with moving parts are potentially hazardous. Every effort has been made to ensure that the machine is safe but operators must avoid engaging in unsafe practices and follow the written instructions provided. The manufacturer has designed this implement to be used with all its safety equipment properly attached to minimize the chance of accidents.

SAFETY FIRST. Completely read and understand the safety section of this manual before operating this equipment. Do not allow anyone to operate this equipment who has not fully read and understood this manual. Contact your Dealer to explain any instructions that you do not fully understand.

The care you give your Bush Hog Implement will greatly determine your satisfaction with its performance and its service life. Carefully read and follow the instructions in this manual to provide you with a thorough understanding of your new implement and its intended use and service requirements.

All references made in this manual to right, left, front, rear, top or bottom are as viewed facing the direction of forward travel with the implement properly attached to the tractor.

Replacement Parts information is located in a separate Parts Manual. Bush Hog mowers use balanced and matched system components for blade carriers, blades, cuttershafts, knives, knife hangers, rollers, drivetrain components, and bearings. These parts are made and tested to Bush Hog specifications. Non-genuine "will fit" parts do not consistently meet these specifications. The use of "will fit" parts may reduce mower performance, void warranties, and present a safety hazard. Use genuine Bush Hog mower parts for economy and safety.

For future reference, record your Bush Hog product model number and serial number.

DEALER to CUSTOMER Pre-Delivery/ Operation Instructions

Dealer should inform the Purchaser of this product of Warranty terms, provisions, and procedures that are applicable. Dealer should inform Purchaser to review the contents of the Operator’s Manual including safety equipment, safe operation, and maintenance, to review the Safety Signs on the implement (and tractor if possible), and of Purchaser’s responsibility to train his/her operators’s in safe operation procedures.

- **IMPLEMENTS**: I have explained that Deflectors, Chain Guards, or Solid Skirts must be installed and maintained in good repair.

- **DRIVELINES**: I have made certain that all driveline, gearbox, and other shields are in good repair and fastened securely in place to prevent injuries from entanglement or thrown objects.

- **HYDRAULIC MACHINES**: I have explained the necessity of using clean hydraulic oil, changing filters as instructed, stopping leaks, damage caused by operating with over-heated oil, caring for hoses, using hoses of proper rating, maintaining the specified operating pressure and the potential hazard of oil’s penetrating the skin.

- **FOLDING-TYPE IMPLEMENTS**: I have explained that it is not possible to guard against thrown objects when the head is lifted off ground and that operator is responsible to watch out for persons in the area. I have explained that the lifted mower head or boom can contact overhead obstructions with damage to cables and telephone lines and possible injury. I have explained that the extended head or boom or retracted boom can contact power lines with resulting electrocution, injury or death and that operator is responsible for keeping clear of such hazards.

**PRE-DELIVERY SERVICE**

**CHECK AND ADJUST OR LUBRICATE AS REQUIRED**

See Operator’s Manual for Details

Inspection Performed - Warranty and Safety Procedures Explained - Installation Complete

**LUBRICATION & HYDRAULICS**

- Gearbox (Oil Levels)
- Hydraulic Oil Level (External Tank)
- Tractor Hydraulic Oil Level
- Hydraulic Hoses (Not Kinked Tighten Connections)
- Front Pump Drive (Assembly Is Tight And Shaft Properly Aligned)

**MOWER**

- Spindle And Motor Bolts Properly Torqued
- Spindle Oil Level
- Blade Carrier Bolts Properly Torqued/Retaining Pin In Place
- Mower Cutting Height And Level Adjusted
- Cutting Shaft Bearings Lubricated
- All Hardware Properly Torqued
- Tire and Air Pressure/Lug Nuts (Correct Torque)
- Wheel Bearings (Check, Grease, and Preload)

**ATTACHMENTS & INSTALLATION**

- Deflectors Front And Rear
- Shredding Attachments
- Correct Blade Rotation Direction
- Axle Arms And Beams
- Tongue And Control Rods (Installed And Adjusted)
- All Bolts - Pins And Nuts (Proper Torque)

**MOWER TO TRACTOR CONNECTIONS**

- Draw Bar Length (Check And Set)
- A-Frame Pivot & Links
- Control Rods (Adjusted Equal)
- Axle Height (Adjusted)
- Cutting Height (Adjust)
- Mount Kit-Pre-Operation Check Complete
- Mower Wing (Adjust Level With The Center)
- Mower Wing (Check For Proper Raising Operation)
- C.V. Driveline (Check Max Turn Radius)
- Pull Type Hitch (Height Adjustment)
- Mounting Hardware Properly Torqued

**SAFETY ITEMS**

- Protective Shields (Operation And Installation)
- Driveline Clutch (Torque Limiter) (Adjust And Run In)
- Safety Decals (Installed)
- Operator’s Manual (Supplied)
- Tractor PTO Shield (Installed)
- S.M.V. Emblem (Installed If Needed)
- Tongue Jack (Installation and Operation)
- Safety Tow Chain (Installed)
- ADMA Driveline Safety Manual Supplied
- AEM Mower Safety Manual (Supplied in Canister)
- AEM Mower Safety Video has been shown to Purchaser

SAFETY SECTION
GENERAL SAFETY INSTRUCTIONS AND PRACTICES

A careful operator is the best operator. Safety is of primary importance to the manufacturer and should be to the owner/operator. Most accidents can be avoided by being aware of your equipment, your surroundings, and observing certain precautions. The first section of this manual includes a list of Safety Messages that, if followed, will help protect the operator and bystanders from injury or death. Read and understand these Safety Messages before assembling, operating or servicing this implement. This equipment should only be operated by those persons who have read the manual, who are responsible and trained, and who know how to do so responsibly.

The Safety Alert Symbol combined with a Signal Word, as seen below, is used throughout this manual and on decals which are attached to the equipment. The Safety Alert Symbol means: “ATTENTION! BECOME ALERT! YOUR SAFETY IS INVOLVED!” The Symbol and Signal Word are intended to warn the owner/operator of impending hazards and the degree of possible injury faced when operating this equipment.

Practice all usual and customary safe working precautions and above all—remember safety is up to YOU. Only YOU can prevent serious injury or death from unsafe practices.

<tr>
<td>CAUTION</td>
<td>Indicates an imminently hazardous situation that, if not avoided, MAY result in MINOR INJURY.</td>
</tr>
<tr>
<td>Important</td>
<td>Identifies special instructions or procedures that, if not strictly observed, could result in damage to, or destruction of the machine, attachments or the environment.</td>
</tr>
</tbody>
</table>

NOTE: Identifies points of particular interest for more efficient and convenient operation or repair.

READ, UNDERSTAND, and FOLLOW the following Safety Messages. Serious injury or death may occur unless care is taken to follow the warnings and instructions stated in this Manual and in the Safety Messages on the implement. Always follow the instruction in this manual and use good common sense to avoid hazards.

Pictographs are used throughout this manual to help bring your visual attention to safety issues.

NOTE: If you want a translation of this safety section in one of the following Languages, please contact: Translations at 1502 E. Walnut Street Seguin, TX 78155; Fax: 830) 372-9529; Safety Section Translations are available in Spanish, Portuguese, French, German, Russian.   -88637

SQ84T 01/19 Safety Section 1-2

© 2019 Alamo Group Inc.
OPERATOR SAFETY

TO AVOID SERIOUS INJURY OR DEATH DO THE FOLLOWING:

- WEAR SAFETY GLASSES, safety shoes, hard hat, hearing protection and gloves when operating or repairing equipment.
- WEAR appropriate breathing respirator when operating in dusty conditions to avoid respiratory diseases.
- DO NOT WEAR loose clothing or jewelry to avoid rotating parts entanglement injury.
- DO NOT USE DRUGS or ALCOHOL before or while operating equipment.
- DO NOT ALLOW anyone to operate equipment under the influence of drug or alcohol.
- CONSULT medical professional for medication impairment side effects.
- STAY ALERT, prolonged operation can cause fatigue, STOP and REST.

GENERAL OPERATING SAFETY

VISIBILITY CONDITIONS WHEN MOWING:

- OPERATE IN DAYLIGHT or with lights that gives at least 100 yards clear visibility.
- BE ABLE TO SEE and identify passersby, steep slopes, ditches, drop-offs, overhead obstructions, power lines, debris and foreign objects.

GROUND SPEED WHEN MOWING:

- NORMAL SPEED range is between 2 to 5mph.
- ADJUST MOWING SPEED for terrain conditions and grass type, density and cut height.
- REDUCE MOWING SPEED when near steep slopes, ditches, drop-offs, overhead obstructions, power lines and to avoid debris and foreign objects.

INSECT INFESTATION

- Do Not operate in areas where bees or insects may attack unless you WEAR PROTECTIVE CLOTHING or use enclosed tractor cab.

PTO SPEED:

- DO NOT EXCEED IMPLEMENT RATED PTO SPEED
- AVOID exceeding rated PTO speeds that may result in broken drivelines or blade failures.

SAFETY SIGNS:

- REPLACE missing, damaged or unreadable safety signs immediately. *PN OS01*
CONNECTION OR DISCONNECTING IMPLEMENT SAFETY

TO AVOID SERIOUS INJURY OR DEATH FROM BEING CRUSHED BY TRACTOR OR IMPLEMENT:

WHEN BACKING tractor to implement hitch:
- **DO NOT ALLOW BYSTANDERS** between tractor and implement

BEFORE connecting and disconnecting implement hitch:
- **STOP TRACTOR ENGINE**, place transmission into park, engage parking brake and remove key.

WHEN connecting and disconnecting implement hitch:
- **DO NOT** crawl or walk under raised mower or wing.
- **USE** tongue **JACK** to lift heavy implement tongues to control implement tongue movement.
- **AVOID** overloading jack to prevent jack failure and injury.

WHEN CONNECTING IMPLEMENT DRIVELINE:

TO AVOID implement driveline coming loose during operation:
- **LUBRICATE** yoke spring locking collar to ensure it freely slides on PTO shaft
- **SECURELY** seat yoke locking balls in PTO shaft groove.
- **PUSH** and **PULL DRIVELINE** on both the tractor and implement **PTO SHAFTS** to ensure it is **SECURELY ATTACHED**

TO AVOID broken driveline during operations:
- **CHECK** driveline for proper length between PTO shaft and implement gearbox shaft.
- Drivelines too short can pull apart or disengage.
- Drivelines too long can bottom out.
- Bottoming driveline telescoping assembly will stop sliding and become solid.
- Driveline bottoming can push through support bearings and break off PTO shaft.

CONTACT DEALER if implement driveline does not match Tractor PTO shaft:
- **DO NOT USE PTO ADAPTER.**
  - Using a PTO adapter can cause:
    - Excessive vibration, thrown objects, blade and implement failures by doubling operating speed.
    - Increased working length exposing unshielded driveline areas and entanglement hazards.

**DO NOT** connect the Mower to a tractor with the PTO directly connected to the Tractor transmission.  **PN CD02**
**CRUSHING HAZARDS**

| Crushing injury from roll over | Lock ROPS in up position | Always wear seatbelt | Crushing injury implement falling |

**DANGER**

TO AVOID SERIOUS INJURY OR DEATH FROM FALLING OFF TRACTOR, EQUIPMENT RUN OVER, ROLLOVER AND CRUSHING BY FALLING WING OR IMPLEMENT:

- USE ROPS and SEAT BELT equipped tractors for mowing operations.
- KEEP ROPS lock in up position.
- ALWAYS BUCKLE UP seat belt when operating tractor and equipment.
- ONLY OPERATE tractor and equipment while seated in tractor seat.

**WHEN RAISING OR LOWERING IMPLEMENT:**

- Raise or lower ONLY WHILE SEATED in tractor seat with seat belt buckled.
- Raise or lower ONLY when implement tongue is securely attached to tractor drawbar TO AVOID implement tip over.
- KEEP BYSTANDERS CLEAR of area TO AVOID crushing.

LIFTED Equipment can fall from mechanical or hydraulic failure or inadvertent Control Lever movement.

**WARNING**

TO AVOID EQUIPMENT FALLING while working near or under lifted wings, components and implements raised by 3-Pointed tractor hitch:

- SECURELY SUPPORT or block up raised equipment and components.
- BLOCK UP and securely support equipment before putting hands, feet or body under raised equipment or lifted components.

**WHEN PARKING** Implement and Tractor:

- LOWER implement, LOCK or BLOCK lifted parts before leaving equipment.
- NEVER leave implement unattended in a raised position.

**WARNING**

TO AVOID CHILDREN FALLING OFF OR BEING CRUSHED BY EQUIPMENT:

- NEVER ALLOW children to play on or around Tractor or Implement.

**WHEN UNHITCHING IMPLEMENT:**

- LOWER implement, LOCK or BLOCK lifted parts before leaving equipment.
- USE tongue jack to control implement tongue movement.
- USE tongue JACK to lift heavy implement tongues.
- AVOID overloading jack to prevent jack failure and injury. **PN CH02**
THROWN OBJECTS HAZARDS

ROTARY MOWERS CAN THROW OBJECTS 300 FEET OR MORE UNDER ADVERSE CONDITIONS.

TO AVOID SERIOUS INJURY OR DEATH TO OPERATOR OR Bystanders FROM THROWN OBJECTS:

• KEEP bystanders 300 feet away

STOP MOVING IF PASSERSBY ARE WITHIN 300 FEET UNLESS:

• ALL THROWN OBJECT SHIELDING including, Front and Rear Deflectors, Chains Guards, Steel Guards, Bands, Side Skirts and Skid Shoes in place and in good condition when mowing.
• Mower sections or wing are adjusted to be close and parallel to ground without exposing blades.
• MOWING AREA has been inspected and foreign materials and debris have been removed.
• PASSERSBY are inside enclosed vehicle.

INSPECT AREA FOR POTENTIAL THROWN OBJECTS BEFORE MOVING:

• REMOVE debris, rocks, wire, cable, metal objects and other foreign material from area.
  Wire, cable, rope, chains and metal objects can be thrown or swing outside deck with great velocity:
  1. MARK objects that cannot removed.
  2. AVOID these objects when mowing.

HIGH GRASS and WEED AREA INSPECTION:

• INSPECT for and REMOVE any hidden large debris.
• MOW at intermediate height
• INSPECT and remove remaining debris
• MOW at final height.

MOWER THROWN OBJECT SHIELDING:

• KEEP all thrown object shielding including, Front and Rear Deflectors, Chains Guards, Steel Guards, Bands, Side Skirts and Skid Shoes in place and in good condition when mowing.
• DO NOT OPERATE with any thrown object shielding missing, damaged or removed.

RIGHT OF WAY (Highway) MOVING

• USE DOUBLE CHAIN GUARDS for highway, right-of-way, parks or greenbelt mowing or all other mowing where human dwellings, vehicles, or livestock could be within 300 feet of the mower.
• No shielding is 100% effective in preventing thrown objects. To Reduce Possibility of Injury:
  1. MAINTAIN MOWER SHIELDING, side skirts, skid shoes, and blades in good operational condition,
  2. RAISE CUTTING HEIGHT to 6 INCHES minimum,
  3. INSPECT AREA thoroughly before mowing to REMOVE potential THROWN OBJECT HAZARDS,
  4. NEVER ALLOW BLADES to CONTACT SOLID OBJECTS like wire, rocks, post, curbs, guardrails, or ground while mowing.  

PN T002
THROWN OBJECTS HAZARDS (CONTINUED)

| Mower Thrown Objects Hazard | Raised Mower Thrown Objects | Inspect Area remove foreign objects | Do not let blades contact solid objects |

**MOWER OPERATION:**
- **DO NOT** exceed mower’s rated Cutting Capacity or cut non-vegetative material.
- **USE ENCLOSED TRACTOR CABS** when two or more mowers are operating in mowing area.
- **ADJUST** mower sections or wing close and parallel to ground without exposing blades.
- **ADJUST** cutting **HEIGHT** to **AVOID BLADE CONTACT** with solid objects like wire, rocks, posts, curbs, guard rails and fixed obstructions.
- **DO NOT** operate mower when mower is raised or in transport position.
- **STOP MOWING** immediately if blades strike heavy objects, fixed structures, metal guard rails and concrete structures:
  1. **BLADES CAN FAIL** from impact and objects can be thrown with great velocity.
  2. **INSPECT** and **REPLACE** any damaged blades.
  3. **CHECK** blade carrier balance and **REPLACE** if damaged.
- **DO NOT** mow in standing water **TO AVOID** possible **BLADE FAILURE**.
- **AVOID MOWING** in reverse:
  1. **STOP PTO** and back up mower.
  2. **LOWER** mower, engage **PTO** and mow forward.
- **STOP PTO** and **BLADES** when raising implement or the mower to transport position.
- **DO NOT ENGAGE PTO** with mower in transport position.
- **STOP** mowing when **EXCESSIVE VIBRATION** occurs:
  1. **STOP PTO** and tractor **ENGINE**.
  2. **INSPECT** mower for vibration source.
  3. **REPLACE** any damage parts and bent or damaged **BLADES**.  

*PN T002-X*
**SANITY**

**RUN OVER HAZARDS**

| Operator run over hazard | Rider fall off run over hazard | Rider fall off run over hazard |

**DANGER**

To avoid serious injury or death from falling off tractor or equipment run over:

- **Use ROPS** and **Seat Belt** equipped tractors for mowing operations.
- **Keep ROPS** locked in **UP** position.
- **Only** start tractor while seated in tractor seat.
- **Always buckle up** seat belt when operating tractor and equipment.
- **Only operate** tractor and equipment while seated in tractor seat.
- **Never allow riders** on tractor or implement.

**When mounting and dismounting tractor:**

- **Only** mount or dismount when tractor and moving parts are stopped.
- **Stop engine and PTO**, engage parking brake, lower implement, allow all moving parts to stop and remove key before dismounting from tractor.  
  *PN R001*
PTO ENTANGLEMENT HAZARDS

**SAFETY**

**PTO ENTANGLEMENT HAZARDS**

<table>
<thead>
<tr>
<th>Entanglement hazard</th>
<th>PTO (Barra Gilatoria)</th>
<th>Make sure PTO shaft is securely attached</th>
<th>DO NOT Operate if PTO shields are damaged or missing</th>
<th>Make sure PTO shafts are proper length</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do Not approach or touch a rotating PTO driveshaft</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**DANGER**

KEEP AWAY FROM ROTATING DRIVELINES AND ELEMENTS TO AVOID SERIOUS INJURY OR DEATH:

**STAY AWAY** and **KEEP** hands, feet and body AWAY from rotating blades, drivelines and parts until all moving elements have stopped.

- **STOP, LOOK** and **LISTEN** before approaching the mower to make sure all rotating motion has stopped.
- **ROTATING COMPONENTS CONTINUE TO ROTATE** after the PTO is shut off.

**PTO SHIELDING:**

**TO AVOID SERIOUS INJURY OR DEATH FROM ENTANGLEMENT WHEN OPERATING IMPLEMENT:**

- **KEEP** PTO shields, integral driveline shields and input shields installed
- **DO NOT OPERATE** mower without shields and guards in place or missing
- **REPAIR OR REPLACE** if damage, broken or missing
- **ALWAYS REPLACE GUARDS** that have been removed for service or maintenance.
- Do Not use PTO or PTO guard as a step.

**TO AVOID** broken driveline during operations:

- **CHECK** driveline for proper length between PTO shaft and implement gearbox shaft. *(Refer to Instructions in Operation Section)*
- Drivelines too short can pull apart or disengage.
- Drivelines too long can bottom out.
  - Bottoming driveline telescoping assembly will stop sliding and become solid.
- Driveline bottoming can push through support bearings and break off PTO shaft
- **AVOID** sharp turns or lift mower to heights to cause driveline "knocking".
- Lubricate driveshaft-telescoping components weekly.

**CONTACT DEALER** if implement driveline does not match Tractor PTO shaft:

- **DO NOT USE PTO ADAPTER.**
  - Using a PTO adapter can cause excessive vibration, thrown objects, blade and implement failures by doubling operating speed. Increased working length exposing unshielded driveline areas. **PN PE01**

SQ84T  01/19  Safety Section 1-9
MOWER BLADE CONTACT HAZARDS

Keep away from rotating blades to avoid serious injury or death from blade contact:

- Stay away and keep hands, feet and body away from rotating blades, drivelines and parts until all moving elements have stopped.
- Do not put hands or feet under mower decks.
- Stop rotating blades disengage PTO and wait for blade to stop rotating before raising mower deck or wings.
- Stop look and listen before approaching the mower to make sure all rotating motion has stopped.
- If a material blockage occurs in the inlet or discharge areas of the mower, shut down tractor engine, disengage the PTO and wait for all rotating motion to stop. Place the tractor in park position, engage the parking brake and remove the key before leaving the operator’s seat. Clear the blockage before proceeding with mowing. Be sure to keep feet and hands clear of the mower blades. If you raise the mower or mower wing to access the blockage, engage the wing lock up latch and securely block up the mower before placing any parts of the body beneath the mower.  

PN MB01

© 2019 Alamo Group Inc.
HIGH PRESSURE OIL LEAK HAZARDS

| High pressure oil penetrating skin | High pressure oil eroding skin | Using cardboard to check for oil leaks |

⚠️ DANGER ⚠️

**TO AVOID SERIOUS INJURY OR DEATH FROM HIGH PRESSURE HYDRAULIC OIL LEAKS PENERATING SKIN:**

- **DO NOT OPERATE** equipment with oil or fuel leaks.
- **KEEP** all hydraulic hoses, lines and connections in **GOOD CONDITION** and **TIGHT** before applying system pressure.
- **RELIEVE HYDRAULIC PRESSURE** before disconnecting lines or working on the system.
- **REMOVE** and replace hose if you suspect it leaks. Have dealer test it for leaks.

**HIGH PRESSURE FLUID LEAKS CAN BE INVISIBLE. WHEN CHECKING FOR HYDRAULIC LEAKS AND WORKING AROUND HYDRAULIC SYSTEMS:**

- **ALWAYS WEAR** safety glasses and impenetrable gloves.
- **USE** paper or cardboard to search for leaks.
- **DO NOT USE** hands or body parts to search for leak.
- **KEEP** hands and body **AWAY** from pin holes and nozzles ejecting hydraulic fluid.
- Hydraulic fluid may cause gangrene if not surgically removed immediately by a doctor familiar with this form of injury.

PN HP01
ELECTRICAL & FIRE HAZARDS

To avoid serious injury or death from electrical contact when working around electrical power lines, gas lines and utility lines:

- **Inspect** mowing area for overhead or underground electrical power lines, obstructions, gas lines, cables and utility, municipal, or other type structure.
- **Do not** allow mower to contact with any utility, municipal, or type of structures and obstructions.
- **Call 811** and 1-800-258-0808 for identify buried utility lines.

Fire prevention guidelines while operating, servicing, and repairing mower and tractor to reduce equipment and grass fire risk:

- **Equip** tractor with a fire extinguisher
- **Do not operate** mower on a tractor equipped with under frame exhaust
- **Do not smoke** or have open flame near mower or tractor
- **Do not drive** into burning debris or freshly burnt area
- **Avoid fire ignition** by not allowing mower blade to contact solid objects like metal or rock.
- **Adjust slip clutches** to avoid excessive slippage and clutch plate heating.
- **Clear** any grass clippings or debris buildup around mower drivelines, slip clutches, and gearboxes.
- **Shut off engine** while refueling. *PN EF02*

## TRANSPORTING HAZARDS

| Use SMV signs and Flashing Lights | Loss of Control Stopping Hazard | Loss of Control Speeding Hazard | Use Safety Tow Chain - Tractor to Implement | Engage Transport Locks |

**TO AVOID SERIOUS INJURY AND DEATH WHEN TOWING OR TRANSPORTING EQUIPMENT:**

- **KEEP** transport speed **BELOW** 20 mph to maintain control of equipment.
- **REDUCE SPEED** on inclines, on turns and in poor towing conditions.
- **DO NOT TOW** with trucks or other vehicles.
- **USE** only properly sized and equipped tractor for towing equipment.
- **FOLLOW** all local traffic regulations.

**TRACTOR REQUIREMENTS FOR TOWING OR TRANSPORTING IMPLEMENTS:**

- **ONLY TRANSPORT** with tractor with **ROPS** in the raised position.
- **USE** properly sized and equipped tractor that exceeds implement weight by at least 20%.
- **KEEP** 20% of tractor weight on front wheels to maintain safe steering.

**BEFORE TRANSPORTING OR TOWING IMPLEMENT:**

**TRACTOR INSPECTION:**

- **CHECK** steering and braking for proper operation and in good condition.
- **CHECK SMV** sign, reflectors and warning lights for proper operation and visibility behind unit.
- **CHECK** that your driving vision is not impaired by tractor, cab, or implement while seated in tractor seat.
- **ADJUST** your operating position, mirrors, and implement transport for clear vision for traveling and traffic conditions.

**PREPARE IMPLEMENT FOR TRANSPORTING OR TOWING:**

- **DISENGAGE PTO**
- **RAISE MOWER**
- **REMOVE** any cut material collected on mower deck.

**TOWED MOWERS - ENGAGE TRANSPORT LOCKS AND SAFETY CHAINS:**

- **INSTALL** center axle cylinder transport stops or pins
- **ATTACH** implement SAFETY CHAIN to tractor

**DETERMINE STOPPING CHARACTERISTICS OF TRACTOR AND IMPLEMENT FOR TRANSPORTING OR TOWING:**

**BRAKING TESTS:**

- **APPLY** brakes at increasing speeds
- **Observe** STOPPING distances increases with increased speeds.
- **DETERMINE** the maximum safe transport speed that does not exceed 20 mph

**DETERMINE MAXIMUM TURNING SPEED BEFORE OPERATING ON ROADS OR UNEVEN GROUND:**

- **TEST** equipment in slowly increasing speed in turns to determine it can be operated at higher speeds.
- **USE** **REDUCED** turning speeds in sharp turns to avoid equipment turning over.

**WHEN TOWING OR TRANSPORTING EQUIPMENT:**

- **Always** **WEAR SEAT BELT** when operating or transporting mower.
- **USE** low speeds to avoid overturn with raised wings.
- **USE** low speeds and gradual steering on curves, hills, rough or uneven surfaces and on wet roads.
- **TURN ON** tractor **FLASHING WARNING LIGHTS.**
- **ALLOW** clearance for implement swing while turning.  

*PN TH02*
## SAFETY

### HAZARDS WITH MAINTENANCE OF IMPLEMENT

<table>
<thead>
<tr>
<th>![Safety Icon]</th>
<th>![Maintenance Icon]</th>
<th>![Engage Icon]</th>
<th>![Inspect Icon]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Periodically inspect all moving parts, lubricate drivelines, and tighten all fasteners</td>
<td>Stop engine remove key before conducting maintenance</td>
<td>Block up implement before servicing Use large blocks on soft or wet soil</td>
<td>Engage Blades for damage or cracks</td>
</tr>
</tbody>
</table>

**WARNING**

Avoid serious injury or death from component failure by keeping implement in good operating condition. In performing proper service, repairs and maintenance:

**BEFORE PERFORMING SERVICE, REPAIRS AND MAINTENANCE ON THE IMPLEMENT:**

- **SECURE EQUIPMENT FOR SERVICE**
- **BLOCK OUT POTENTIAL ENERGY HAZARDS:** Rotating Parts, Raised Components, Hydraulic Pressure.
- **STOP ENGINE** engage parking brake and allow all moving parts to stop and remove key before dismounting from tractor seat.
- **PLACE** implement on ground or securely block up raised equipment. Use large blocks on soft or wet soil.
- **PUSH** and **PULL** Remote Hydraulic Cylinder lever to relieve hydraulic pressure.
- **DISCONNECT IMPLEMENT drive line** from tractor PTO Shaft.

**WEAR SAFETY GLASSES, PROTECTIVE GLOVES** and follow **SAFETY PROCEDURES** when performing service, repairs and maintenance on the implement:

- **ALWAYS** WEAR protective GLOVES when handling chemicals or worn component with sharp edges.
- **ALWAYS** WEAR GLOVES and SAFETY GLASSES when servicing components.
- **AVOID CONTACT** with hot hydraulic oil tanks, pumps, motors, valves and hose connection surfaces.
- **SECURELY support or BLOCK UP** raised implement, framework and lifted components before working underneath equipment.
- **STOP** any implement movements and **SHUT-OFF TRACTOR** engine before doing any work procedures.
- **USE** ladder or raised stands to reach high equipment areas inaccessible from ground.
- **ENSURE** good footing by standing on solid flat surfaces when getting on implement to perform work.
- **FOLLOW** manufacturer's instructions in handling oils, solvents, cleansers, and other chemical agents.
- **DO NOT change any factory-set hydraulic calibrations to avoid component or equipment failures.**
- **DO NOT modify or alter implement functions or components.**
- **DO NOT WELD** or repair rotating mower components. These may cause vibrations and component failures being thrown from mower.

**PERFORM SERVICE, REPAIRS, LUBRICATION AND MAINTENANCE OUTLINED IN IMPLEMENT MAINTENANCE SECTION:**

- **INSPECT** for loose fasteners, worn or broken parts, leaky or loose fittings, missing or broken cotter keys and washers on pins, and all moving parts for wear.
- **REPLACE** any worn or broken parts with authorized service parts.
- **LUBRICATE** unit as specified by lubrication schedule.
- **NEVER** lubricate, adjust or remove material while it is running or in motion.
- **TORQUE** all bolts and nuts as specified.

**BLADE INSPECTION:**

- **REPLACE** bent, damage, cracked or broken blades immediately with new blades.
- **AVOID** blade failures and thrown broken blades. **DO NOT** straighten, weld, or weld hard-facing blades.

**SAFETY SHIELDS, GUARDS AND SAFETY DEVICES INSPECTION:**

- **KEEP** all Deflectors, Chain Guards, Steel Guards, Gearbox Shields, and PTO integral shields, Bands, Side Skirts and Skid Shoes in place and in good condition.
- **REPLACE** any missing, broken or worn safety shields, guards and safety devices.

**WARNING**

Operating, servicing and maintaining this equipment can expose you to chemicals including gasoline, diesel fuel, lubricants, petroleum products, engine exhaust, carbon monoxide, and phthalates, which are known to the State of California to cause cancer and birth defects or other reproductive harm. To minimize exposure, avoid breathing exhaust, do not idle the engine except as necessary, service your vehicle in a well-ventilated area and wear gloves or wash your hands frequently when servicing your vehicle. Battery posts, terminals and related accessories contain lead and lead compounds, chemicals known to the state of California to cause cancer, birth defects or other reproductive harm. For more information go to [www.P65Warnings.ca.gov](http://www.P65Warnings.ca.gov). This website, operated by California's Office of Environmental Health Hazard Assessment, provides information about these chemicals and how individuals may be exposed to them.

*PN HM01*
PARTS INFORMATION

Bush Hog mowers use balanced and matched system components for blade carriers, blades, cuttershafts, knives, knife hangers, rollers, drivetrain components, and bearings. These parts are made and tested to Bush Hog specifications. Non-genuine "will fit" parts do not consistently meet these specifications. The use of "will fit" parts may reduce mower performance, void warranties, and present a safety hazard. Use genuine Bush Hog mower parts for economy and safety. (SPBH-1)

SEE YOUR BUSH HOG DEALER
Decal Location

NOTE: Bush Hog supplies safety decals on this product to promote safe operation. Damage to the decals may occur while in shipping, use, or reconditioning. Bush Hog cares about the safety of its customers, operators, and bystanders, and will replace the safety decals on this product in the field, free of charge (Some shipping and handling charges may apply). Contact your Bush Hog dealer to order replacement decals.

Decal Description

**WARNING**
Crushing Hazard
To avoid injury from mower falling over:
- DO NOT store mower vertically on shipping brackets.
- Store mower lying down.

**DANGER**
GUARD MISSING DO NOT OPERATE

**WARNING**
OPERATE THIS MACHINE AT 540 RPM
TRACTOR PTO SPEED ONLY.
Overspeeding PTO may cause component failure resulting in bodily injury.
TRACTOR PTO ROTATION: CLOCKWISE
SAFETY

**DANGER**

**ENTANGLEMENT HAZARD**

To avoid serious injury or death:
- Do not operate without guards in place and in good condition. PTO and gearbox guarding are subject to wear.
- Stay away and keep hands, feet, and body away from rotating blades, drivelines, and parts that continue to move after power shut-off. Wait until all moving elements have stopped.
- Always replace guards that have been removed for service or maintenance.
- Stop, look, and listen for rotation before approaching implement.
- Do not step on drivelines or guards.

**DANGER**

**Crushing Hazard - Injury or Death**

To avoid serious injury or death:
- Use tractor equipped with Rollover Protective Structure ("ROPS") including rollover bar and seat belt. Keep rollover bar in raised position.
- Stand clear when removing transport latch, lowering or raising wings.
- Implement can fall from hydraulic failure or accidental operation of controls.
- Block up and securely support equipment before putting hands, feet, or body under raised equipment or lifted components.

**DANGER**

**Run Over Hazard - Injury or Death**

To avoid serious injury or death:
- Always buckle up seat belt.
- Only start tractor while seated in the operator's seat.
- Stop engine and PTO, engage parking brake, lower implement, allow all moving parts to stop and remove key before dismantling from tractor.
- Know how to stop tractor and equipment quickly for an emergency.
- Do not mount on or dismount tractor in motion.
- Never allow riders on tractor or implement.
- Never allow children to operate or ride on tractor or implement.
- Keep bystanders clear of area before moving tractor or implement.
- Keep alert and avoid hitting stumps, holes, ruts, and uneven terrain.
- Avoid tree limits, brush, and other overhanging objects that can strike and throw the operator from seat.

**WARNING**

Non-genuine parts can fall catastrophically.

- Only use genuine Bush Hog replacement parts.
- Non-genuine parts can fail creating hazardous conditions for operator and bystanders.

Contact local dealer or Bush Hog about repair parts at:
2501 Griffin Ave, Selma, CA 93662.
Email: contactus@bushhog.com
www.algr.com/bpm

**WARNING**

Cancer and Reproductive Harm
www.P65Warnings.ca.gov

**IMPORTANT**

BE AWARE
BE ALERT
BE TRAINED
Before Operating this Mower

To prevent serious injury to yourself and/or bystanders, be trained in Safe Mowing Practices. Alamo Group Companies as well as AEM and FEMA provide training material that is critical for your safety and the safety of others when operating this equipment. Make these Safety Procedures an important part of every workday. Read and understand the Operator's Manual.

Do not let untrained individuals operate this equipment. Contact your Dealer; AEM (www.aem.org), FEMA (314-876-2304), FarmEquipment.org, or Alamo Group (www.Alamo-Group.com) for information on training material or courses that provide training in Safer Operating Practices for Mowers.
Federal Laws and Regulations

This section is intended to explain in broad terms the concept and effect of federal laws and regulations concerning employer and employee equipment operators. This section is not intended as a legal interpretation of the law and should not be considered as such.

Employer-Employee Operator Regulations

U.S. Public Law 91-596 (The Williams-Steiger Occupational and Health Act of 1970) OSHA

This Act Seeks:

"...to assure so far as possible every working man and woman in the nation safe and healthful working conditions and to preserve our human resources..."

DUTIES

Sec. 5 (a) Each employer-

(1) shall furnish to each of his employees employment and a place of employment which are free from recognized hazards that are causing or are likely to cause death or serious physical harm to his employees;

(2) shall comply with occupational safety and health standards promulgated under this Act.

(b) Each employee shall comply with occupational safety and health standards and all rules, regulations and orders issued pursuant to this Act which are applicable to his own actions and conduct.

OSHA Training Requirements

Operator instructions. At the time of initial assignment and at least annually thereafter, the employer shall instruct every employee who operates an agricultural tractor and implements in the safe operating practices and servicing of equipment with which they are or will be involved, and of any other practices dictated by the work environment.

Keep all guards in place when the machine is in operation;

Permit no riders on equipment

Stop engine, disconnect the power source, and wait for all machine movement to stop before servicing, adjusting, cleaning or unclogging the equipment, except where the machine must be running to be properly serviced or maintained, in which case the employer shall instruct employees as to all steps and procedures which are necessary to safely service or maintain the equipment.

Make sure everyone is clear of machinery before starting the engine, engaging power, or operating the machine.

Employer Responsibilities:

To ensure employee safety during Tractor and Implement operation, it is the employer’s responsibility to:

1. Train the employee in the proper and safe operation of the Tractor and Implement.
2. Require that the employee read and fully understand the Tractor and Implement Operator’s manual.
3. Permit only qualified and properly trained employees to operate the Tractor and Implement.
4. Maintain the Tractor and Implement in a safe operational condition and maintain all shields and guards on the equipment.
5. Ensure the Tractor is equipped with a functional ROPS and seat belt and require that the employee operator securely fasten the safety belt and operate with the ROPS in the raised position at all times.
6. Forbid the employee operator to carry additional riders on the Tractor or Implement.
7. Provide the required tools to maintain the Tractor and Implement in a good safe working condition and provide the necessary support devices to secure the equipment safely while performing repairs and service.
8. Require that the employee operator stop operation if bystanders or passersby come within 300 feet.

Child Labor Under 16 Years of Age

Some regulations specify that no one under the age of 16 may operate power machinery. It is your responsibility to know what these regulations are in your own area or situation. (Refer to U.S. Dept. of Labor, Employment Standard Administration, Wage & Home Division, Child Labor Bulletin #102.)
INTRODUCTION SECTION
We are pleased to have you as a Bush Hog customer. Your Rotary Cutter has been carefully designed with care and built with quality materials by skilled workers to give maximum service with minimum down time. This manual is provided to give you the necessary operating and maintenance instructions for keeping your rotary cutter in top operating condition. Careful use and timely service saves extensive repairs and costly downtime losses. Please read this manual thoroughly. Understand what each control is for and how to use it.

Bush Hog typically offers three types of shielding to protect the operator, passerby, livestock, and property from thrown objects... deflectors, single chain guards, and double chain guards. Shielding should be selected based on the intended use of the mower. Double chain guards or deflectors should be used for highway, right-of-way, parks or greenbelt mowing or all other mowing where human dwellings, vehicles, or livestock could be within 300 feet of the mower. Chain guards are more durable, provide a longer service life and require less maintenance and replacement than deflectors. Single chain guards may be sufficient for agriculture and other mower use only where passersby or property are not within 300 feet of the mower during operation.

No shielding is 100% effective in preventing thrown objects. The possibility of injury and property damage from this hazard can be substantially reduce by selecting proper shielding, maintaining the mower and shielding in good operational condition, inspecting the area for foreign debris before mowing, operating the mower at a minimum cutting height of 4", and keep unprotected persons at a minimum distance of 300 feet from the mower at all times during operation.

Safety is of primary importance to the owner/operator and to the manufacturer. Observe all safety precaution decals on the machine and noted throughout the manual for safe operation of implement. If any assistance or additional information is needed, contact your authorized Bush Hog dealer. The owner/operator/dealer should know and understand the Safety Messages before assembly and be aware of the hazards of operating this cutter during assembly, use, and maintenance. The Safety Alert Symbol combined with a Signal Word, as seen below, is intended to warn the owner/operator of impending hazards and the degree of possible injury faced when operating this machine.

- **DANGER** Indicates an imminently hazardous situation that, if not avoided, WILL result in DEATH OR VERY SERIOUS INJURY.
- **WARNING** Indicates an imminently hazardous situation that, if not avoided, COULD result in DEATH OR SERIOUS INJURY.
- **CAUTION** Indicates an imminently hazardous situation that, if not avoided, MAY result in MINOR INJURY.
- **Important** Identifies special instructions or procedures that, if not strictly observed, could result in damage to, or destruction of the machine, attachments or the environment.
The SQ84T Squealer Rotary Mower is designed for light duty applications such as weeds, grass, and light brush. This mower is dual spindle with four free-swinging blades. Each cutter has free-swinging blades which reduce the shock of impact when a stationary object is hit. The SQ84T has a slip clutch standard. Standard equipment includes driveline shields, clutch shields and front and rear discharge shields (deflectors).

**SQ84T Equipment Specifications**

- **Cutting Width**: 84" 
- **Width**: 87" 
- **Length**: 84" 
- **Cutting Height**: 2" - 12" 
- **Tractor HP Required**: 15 - 25HP 
- **Cutting Capacity**: (max 1-1/2") 
- **Weight**: 720 lbs. 
- **Hitch**: Cat. 1 
- **Gearbox HP**: Main 60, Outboard 45 
- **Blade Tip Speed**: 11,500 ft./min. 
- **Blades**: 1/2 x 4" 
- **Driveline Protection**: Slip Clutch
INTRODUCTION

KEY OPERATION POINTS

• Cutting performance and distribution are best when cutter is level from side to side and front to rear.

• In extra heavy material, rear chains will allow better discharge and better distribution than solid rear bands.

• Never operate the Mower below full PTO speed of 540.

• Corn should be cut at 5 to 6 mph. If full PTO rpm cannot be maintained, use one lower gear.

Operating Noise Level/Sound Pressure

The sound levels at the operator's ear from the attached machine (rotary cutter) are at least 10 dB(A) below the levels from typical Agricultural tractors used to power and transport this machine. Therefore, the Noise emission values given by the OEM of the Agricultural tractor used to power and transport this machine would be valid when this machine is attached to and operated by that Agricultural tractor in all OEM recommended applications.

Warranty information

In addition to the standard Limited Warranty shown on the facing page, Bush Hog also provides:

1. A FIVE-YEAR (60 months) LIMITED WARRANTY* on GEARBOX components provided they have been properly maintained† and have not been subjected to abuse or mis-use except as limited below.

   * WARRANTY LIMITATIONS - GEARBOX
   A. Warranty is ONE-YEAR (12 MONTHS) for Seals (After one year, seals are considered to be WEARING PARTS and replacement is the users' responsibility.)
   B. Users' Gearboxes may be rebuilt by Bush Hog or replaced by new or rebuilt Gearboxes at the option of Bush Hog.

2. ONE-YEAR (12 months) LIMITED WARRANTY** on the DRIVELINE components provided they have been properly maintained† and have not been subjected to abuse or mis-use.

   **WARRANTY LIMITATIONS - DRIVELINE
   A. Warranty is ONE-YEAR (12 MONTHS) for DRIVELINE SHIELDS except that evidence of wear from contact with other parts on the shield voids this warranty.
   B. Shield Bearings are wearing parts and are not warrantable.
   C. Slip-Clutch Disks are wearing parts and are not warrantable. Evidence of "burning up" Slip Clutch Plates due to improper adjustment will void warranty on Slip Clutch Parts.*

   NOTE - "properly maintained" specifically includes, but is not limited to:
   A) Running Gearboxes with the proper amount of the correct lubricant.
   B) Adjusting Slip Clutches correctly to provide proper protection for Driveline and Gearbox Components.
   C) Properly lubricate all driveline components as specified.
   D) Maintaining proper bearing preload on all gearbox shafts.
INTRODUCTION

LIMITED WARRANTY

Bush Hog warrants to the original purchaser of any new Bush Hog equipment, purchased from an authorized Bush Hog dealer, that the equipment be free from defects in material and workmanship for a period of one (1) year for non-commercial, state and municipalities’ use and ninety (90) days for commercial use from date of retail sale. The obligation of Bush Hog to the purchaser under this warranty is limited to the repair or replacement of defective parts.

Replacement or repair parts installed in the equipment covered by this limited warranty are warranted for ninety (90) days from the date of purchase of such part or to the expiration of the applicable new equipment warranty period, whichever occurs later. Warranted parts shall be provided at no cost to the user at an authorized Bush Hog dealer during regular working hours. Bush Hog reserves the right to inspect any equipment or parts which are claimed to have been defective in material or workmanship.

DISCLAIMER OF IMPLIED WARRANTIES & CONSEQUENTIAL DAMAGES

Bush Hog’s obligation under this limited warranty, to the extent allowed by law, is in lieu of all warranties, implied or expressed, INCLUDING IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE and any liability for incidental and consequential damages with respect to the sale or use of the items warranted. Such incidental and consequential damages shall include but not be limited to: transportation charges other than normal freight charges; cost of installation other than cost approved by Bush Hog; duty; taxes; charges for normal service or adjustment; loss of crops or any other loss of income; rental of substitute equipment, expenses due to loss, damage, detention or delay in the delivery of equipment or parts resulting from acts beyond the control of Bush Hog.

THIS LIMITED WARRANTY SHALL NOT APPLY:

1. To vendor items which carry their own warranties, such as engines, tires, and tubes.

2. If the unit has been subjected to misapplication, abuse, misuse, negligence, fire or other accident.

3. If parts not made or supplied by Bush Hog have been used in connection with the unit, if, in the sole judgement of Bush Hog such use affects its performance, stability or reliability.

4. If the unit has been altered or repaired outside of an authorized Bush Hog dealership in a manner which, in the sole judgement of Bush Hog, affects its performance, stability or reliability.

5. To normal maintenance service and normal replacement items such as gearbox lubricant, hydraulic fluid, worn blades, or to normal deterioration of such things as belts and exterior finish due to use or exposure.

6. To expendable or wear items such as teeth, chains, sprockets, belts, springs and any other items that in the company’s sole judgement is a wear item.

NO EMPLOYEE OR REPRESENTATIVE OF BUSH HOG IS AUTHORIZED TO CHANGE THIS LIMITED WARRANTY IN ANY WAY OR GRANT ANY OTHER WARRANTY UNLESS SUCH CHANGE IS MADE IN WRITING AND SIGNED BY BUSH HOG’S SERVICE MANAGER, 2501 GRIFFIN AVE., SELMA, ALABAMA 36703.

Record the model number, serial number and date purchased. This information will be helpful to your dealer if parts or service are required.

SQ84T 01/19

Introduction Section 2-5

©2019 Alamo Group Inc.
DEALER SETUP INSTRUCTIONS

The mower as received from the factory is partially assembled and requires minimum time to complete assembly and is ready for sale.

Some models may be shipped vertically with shipping brackets. These shipping brackets are intended for use in transporting the mower from the factory to dealer.

**WARNING** DO NOT use these brackets to store the unit. DO NOT store mower vertically, the mower can fall over resulting in serious injury or death. To avoid injury always store mower lying down on flat ground.

Assembly will be easier if components are aligned and loosely assembled before tightening hardware. Refer to bolt torque chart in Maintenance Section. All bolts are grade 5 unless otherwise specified.
SETUP INSTRUCTIONS - STANDARD HITCH

1. With the mower sitting flat on the ground loosen the fasteners attaching the “A” frame struts to the frame and rotate up into the vertical position.

2. After placing the “A” Frame in the vertical position tighten the larger nut just tight enough to allow the “A” Frame to pivot. Holding the larger nut in position tighten the jam nut (Smaller Nut) against the larger nut to lock in this position allowing the base frame of the cutter to float when in use.

SETUP INSTRUCTIONS - SHIELDING AND DEFLECTORS

The Bush Hog SQ84T as shipped from the factory, have all Shielding and Deflectors in place. Dealer should inspect to make sure that all Safety Shielding and Deflectors are in place and fasteners are tight.

Front and Rear Deflectors are Standard Equipment. One type of guard must be installed (and maintained in good repair) except for agricultural purposes only in areas where persons, vehicles, livestock, or other property will not be endangered by thrown objects and where such safety equipment would prevent the mower’s reasonable performance of its assigned agricultural task.

Deflectors: Front and Rear Deflectors (Standard Equipment) are recommended for the average user and will provide protection from thrown objects with proper operation under normal conditions. Deflectors must be maintained in good repair or replaced after no more than two inches of wear off lower edge.
SETUP INSTRUCTIONS - TAILWHEEL
Bush Hog SQ84T models as shipped from the factory Tailwheel Frame and Tailwheel mounted to the unit.

ADJUSTING FOR WORK

The cutter should be operated at the highest position which will give desired cutting results. This will help prevent the blades from striking the ground, reducing blade wear and undue strain on the machine. For best results under heavier cutting conditions, always tilt the cutter approximately 2 inches (51mm) lower in the front. This tilt decreases horsepower requirements and increases potential ground speed. When fine shredding is desired, adjust cutter deck level or slightly lower in the rear. This will keep the foliage under cutter until thoroughly shredded. More power is required for shredding. Each cutter can be adjusted to several cutting heights. The SQ84T can be adjusted from 2” to 12” of cutting height. To adjust, raise cutter and block securely in position. Remove bolt from adjusting bracket shown in Figure below. Adjust tailwheel arm up or down and secure in desired position.
DRIVELINE ATTACHMENT - SLIP CLUTCH

Before starting assembly, make certain that all paint, dirt, and grease are removed from gearbox shaft (1). To ease assembly apply a light coat of grease to splines and assemble. Do not assemble a driveline without a shield. Entanglement in rotating shafts can kill. **Figure Asm-R-0506**

Remove tapered pin from splined clutch hub on the end of the driveshaft. Rotate the clutch shield up over the top of the gearbox to expose the gearbox input shaft.

Slide the slip clutch end of the driveline onto the gearbox input shaft. Make certain that the slip clutch is fully onto the input shaft splines. Align the tapered pin hole in the hub with the groove on the input shaft. Install the tapered pin, washer and locknut. Torque the nut to 30 ft. lbs.

SLIP CLUTCH ADJUSTMENT and OPERATIONAL CHECK

1. Remove filler plug on top of gearbox housing and oil level plug on right side of housing. Fill gearbox with EP80W-90 gear oil until oil just reaches bottom of level plug hole. Allow time for oil to seep through bearings into lower housing of gearbox and then add oil again to reach level plug hole. Replace filler plug on top of gearbox with breather plug/dipstick supplied in Operator’s manual Package.

2. Connect cutter to tractor’s 3-point hitch, attaching top link in holes of A-frame struts using customer-supplied pin. Attach lower link arms to cutter deck using the pins and bushings supplied with the cutter. Refer to Hitch Pin Setup for correct setup.

3. Connect free end of driveline to tractor PTO shaft by pulling back on collar on driveline yoke and then sliding yoke onto shaft. Release collar and slide driveline yoke back and forth on shaft until an audible click is heard (ball collar has seated in groove on PTO shaft).

4. Loosen eight (8) nuts retaining clutch springs by 1/3 of a turn or until spring can be turned with fingers.

5. Start tractor and allow tractor to idle. With tractor at idle speed, engage tractor PTO drive for 2 - 3 seconds. Clutch should slip without turning cutter blades.

6. Disengage tractor PTO and turn off tractor ignition.

7. Re-tighten nuts on clutch springs to within 1/64” of original position. Initial spring length shown below.

**IMPORTANT: REFER TO CHART ON THE NEXT PAGE FOR PROPER SPRING SET_UP. DO NOT OVERTIGHTEN NUT AND CAUSE SPRING TO BECOME SOLID AS THIS WILL CAUSE THE SHAFT TO FAIL.**
BUSH HOG SQ84T SLIP CLUTCHES

Bush Hog SQ84T Rotary Cutters come with Comer driveshafts with slip clutches installed. While these clutches are similar, refer to Figure below to help identify which clutch you are adjusting. Comer castings have centrally located holes through them.

![Diagram of Comer clutches with centrally located holes and spring lengths labeled 1.25" (31.8mm).]
It is the operator’s responsibility to be knowledgeable of all potential operating hazards and to take every reasonable precaution to ensure oneself, others, animals, and property are not injured or damaged by the mower, tractor, or a thrown object. Do not operate the mower if passersby, pets, livestock, or property are within 300 feet of the unit unless:

- **All THROWN OBJECT SHIELDING** including, Front and Rear Deflectors, Chains Guards, Steel Guards, Bands, Side Skirts and Skid Shoes in place and in good condition when mowing.
- Mower sections or wing are adjusted to be close and parallel to ground without exposing blades.
- **MOWING AREA** has been inspected and foreign materials and debris have been removed.
- **PASSE RSBY** are inside enclosed vehicle.

This section of the Operator’s Manual is designed to familiarize, instruct, and educate safe and proper mower use to the operator. Pictures contained in this section are intended to be used as a visual aid to assist in explaining the operation of a rotary mower. Some pictures may show shields removed for purposes of clarity. NEVER OPERATE this implement without all shields in place and in good operational condition. The operator must be familiar with the mower and tractor operation and all associated safety practices before operating the mower and tractor. Proper operation of the mower, as detailed in this manual, will help ensure years of safe and satisfactory use of the mower.

IMPORTANT: To avoid mower damage, retorque all bolts after the first 10 hours of operation. Retighten blade carrier retaining nut on gearbox lower shaft to 450 ft. lbs.

READ AND UNDERSTAND THE ENTIRE OPERATING INSTRUCTIONS AND SAFETY SECTION OF THIS MANUAL AND THE TRACTOR MANUAL BEFORE ATTEMPTING TO USE THE TRACTOR AND IMPLEMENT. If you do not understand any of the instructions, contact your nearest authorized dealer for a full explanation. Pay close attention to all safety signs and safety messages contained in this manual and those affixed to the implement and tractor. **OPS-U-0001**

READ, UNDERSTAND, and FOLLOW the following Safety Messages. Serious injury or death may occur unless care is taken to follow the warnings and instructions stated in the Safety Messages. Always use good common sense to avoid hazards. **(SG-2)**

Si no lee ingles, pida ayuda a alguien que si lo lea para que le traduzca las medidas de seguridad. **(SG-3)**

---

© 2019 Alamo Group Inc.
1. OPERATOR REQUIREMENTS

Safe operation of the unit is the responsibility of a qualified operator. A qualified operator has read and understands the implement and tractor Operator’s Manuals and is experienced in implement and tractor operation and all associated safety practices. In addition to the safety messages contained in this manual, safety signs are affixed to the implement and tractor. If any part of the operation and safe use of this equipment is not completely understood, consult an authorized dealer for a complete explanation.

If the operator cannot read the manuals for themselves or does not completely understand the operation of the equipment, it is the responsibility of the supervisor to read and explain the manuals, safety practices, and operating instructions to the operator.

Safe operation of equipment requires that the operator wear approved Personal Protective Equipment (PPE) for the job conditions when attaching, operating, servicing, and repairing the equipment. PPE is designed to provide operator protection and includes the following safety wear:

PERSONAL PROTECTIVE EQUIPMENT (PPE)

- Always Wear Safety Glasses
- Hard Hat
- Steel Toe Safety Footwear
- Gloves
- Hearing Protection
- Close Fitting Clothing
- Respirator or Filter Mask (depends on operating conditions) \textit{OPS-U-0002}

\begin{itemize}
\item DO NOT use drugs or alcohol immediately before or while operating the Tractor and Implement. Drugs and alcohol will affect an operator’s alertness and coordination and therefore affect the operator’s ability to operate the equipment safely. Before operating the Tractor or Implement, an operator on prescription or over-the-counter medication must consult a medical professional regarding any side effects of the medication that would hinder their ability to operate the Equipment safely. NEVER knowingly allow anyone to operate this equipment when their alertness or coordination is impaired. Serious injury or death to the operator or others could result if the operator is under the influence of drugs or alcohol. (SG-27)
\end{itemize}
2. TRACTOR REQUIREMENTS

The tractor used to operate the mower must have the power capacity to lift, pull, and operate the Power Take Off (PTO) at the mower’s rated speed while traveling at a ground speed between 2 and 5 MPH. Operating the mower with a tractor that does not meet the following requirements may cause tractor or mower damage and be a potential danger to the operator and passersby.

Tractor Requirements and Capabilities

- **ASABE approved Roll-Over Protective Structure (ROPS) or ROPS cab and seat belt.**
- **Tractor Safety Devices:** Slow Moving Vehicle (SMV) emblem, lighting, PTO master shield
- **Tractor Horsepower:** Minimum 30HP
- **Hitch - Lift Type Mower:** 3-Point Hitch CAT 1- Lifting Capacity 720lbs
- **Front End Weight:** As needed to maintain 20% weight on front axle

2.1 ROPS and Seat Belt

The tractor must be equipped with a Roll-Over-Protective-Structure (ROPS) (tractor cab or roll-bar) and seat belt to protect the operator from falling off the tractor, especially during a roll over where the driver could be crushed and killed. Only operate the tractor with the ROPS in the raised position and seat belt fastened. Tractor models not equipped with a ROPS and seat belt should have these life saving features installed by an authorized dealer. **OPS-U-0003**

**WARNING**
Operate this Equipment only with a Tractor equipped with an approved roll-over-protective system (ROPS). Always wear seat belts. Serious injury or even death could result from falling off the tractor—particularly during a turnover when the operator could be pinned under the ROPS. (SG-7)

2.2 Tractor Safety Devices

If transporting or operating the tractor and implement near a public roadway, the tractor must be equipped with proper warning lighting and a Slow Moving Vehicle (SMV) emblem which are clearly visible from the rear of the unit. Lights and a SMV emblem must be equipped directly on implements if the visibility of the tractor warning signals are obscured.

Maintain all manufacturer equipped safety shields and guards. Always replace shields and guards that were removed for access to connect, service, or repair the tractor or implement. Never operate the tractor PTO with the PTO master shield missing or in the raised position. **OPS-U-0004**
2.3 Tractor Horsepower
The power required to operate a mower is determined by the tractor PTO horsepower. For most mowing conditions the SQ84T is 30 HP. Operating the mower with a tractor that does not have adequate power may damage the tractor engine. Exceeding recommended HP may cause mower damage by overpowering the unit in heavy cutting conditions.

2.4 3-Point Hitch
The tractor 3-point hitch must be rated to lift at least 720lbs (SQ84T). These models are designed to be mounted on a tractor CAT I - 3 Point Hitch.

Refer to the tractor operator’s manual for the category of the tractor being used. If the hitch does not conform to ASABE CAT I dimensions, the mower may not fit or raise properly. Consult an authorized dealer for possible modification procedures to mount non-conforming hitches.

Depending on the hitch category, certain size pins are used to attach the mower to the tractor. CAT I hitches require 7/8” lower and 3/4” upper diameter hitch pins.

2.5 Power Take Off (PTO)
This mower is designed to operate at a PTO speed of 540. Most tractors operate at either 540, or a combination of 540 and 1000 RPM PTO speeds. The operating speed of the mower and tractor can be determined by the number of splines on the driveline yoke and PTO output shaft. Those operating at 540 RPM will have a 6-spline shaft and those operating at 1000 RPM will have a 21-spline shaft. Note: The mower will not operate on tractors equipped with a 1000 RPM 21-spline or 1000 RPM 20-spline, 1-3/4” shaft.

If operating an older model tractor where the tractor’s transmission and PTO utilize one master clutch, an over-running clutch must be used between the PTO output shaft and the driveline of the mower. An authorized tractor dealer can provide the over-running clutch and its installation if needed.  OPS-R- 0066
**DANGER**

DO NOT use a PTO adapter to attach a non-matching Implement driveline to a Tractor PTO. Use of an adapter can double the operating speed of the Implement resulting in excessive vibration, thrown objects, and blade and implement failure. Adapter use will also change the working length of the driveline exposing unshielded driveline areas. Serious bodily injury and/or equipment failure can result from using a PTO adapter. Consult an authorized dealer for assistance if the Implement driveline does not match the Tractor PTO. (S3PT-14)

**WARNING**

Never operate the Tractor and Mower if the Implement input driveline is directly connected to the Tractor transmission. Tractor braking distances can be substantially increased by the momentum of the rotating Mower blades driving the Tractor transmission even though the Tractor clutch has been disengaged. Install an over running clutch between the Tractor PTO and the Mower driveline to prevent this potentially dangerous situation. (S3PT-16)

**DANGER**

Do not connect the PTO driveline to the tractor or operate the implement unless the implement is securely connected to the tractor.

### 2.6 Tire Spacing

Tractor tires should be set a minimum of 60" (1.5 mm) apart measured from inside of tire to inside of tire. Refer to the tractor Operator’s Manual or consult an authorized dealer for instructions to change tractor tire spacing. *OPS-R- 0062*

### 3. GETTING ON AND OFF THE TRACTOR

Before getting onto the tractor, the operator must read and completely understand the implement and tractor operator manuals. If any part of either manual is not completely understood, consult an authorized dealer for a complete explanation. *OPS-U- 0007*

**WARNING**

Do not mount or dismount the Tractor while the tractor is moving. Mount the Tractor only when the Tractor and all moving parts are completely stopped. (SG-12)
3.1 Boarding the Tractor
Use both hands and equipped handrails and steps for support when boarding the tractor. Never use control levers for support when mounting the tractor. Seat yourself in the operator’s seat and secure the seat belt around you.

Never allow passengers to ride on the tractor or attached equipment. Riders can easily fall off and be seriously injured or killed from falling off and being ran over. It is the operator’s responsibility to forbid all extra riders at all times. **OPS-U-0008**

**DANGER** Never allow children to operate, ride on, or come close to the Tractor or Implement. Usually, 16-17 year-old children who are mature and responsible can operate the implement with adult supervision, if they have read and understand the Operator’s Manuals, been trained in proper operation of the tractor and implement, and are physically large enough to reach and operate the controls easily. **(SG-11)**

**DANGER** Never allow children or other persons to ride on the Tractor or Implement. Falling off can result in serious injury or death. **(SG-10)**

3.2 Dismounting the Tractor
Before dismounting, park the tractor and implement on a reasonably level surface, apply the parking brake, idle the engine down, disengage the PTO, and lower the implement to the ground. Shut down the tractor engine according to the operator’s manual, remove the key, and wait for all motion to completely stop. Never leave the seat until the tractor, its engine and all moving parts have come to a complete stop.

Use hand rails and steps when exiting the tractor. Be careful of your step and use extra caution when mud, ice, snow or other matter has accumulated on the steps or hand rails. Use all handrails and steps for support and never rush or jump off the tractor. **OPS-U-0009**

**DANGER** BEFORE leaving the tractor seat lower the implement, set the parking brake and/or set the tractor transmission in parking gear, disengage the PTO, stop the engine, remove the key, and wait for all moving parts to stop. Place the tractor shift lever into a low range or parking gear to prevent the tractor from rolling. Never dismount a Tractor that is moving or while the engine is running. Operate the Tractor controls from the tractor seat only. **(SG-9)**
4. STARTING THE TRACTOR

The operator must have a complete understanding of the placement, function, and operational use of all tractor controls before starting the tractor. Review the tractor operator’s manual and consult an authorized dealer for tractor operation instructions if needed.

Essential Tractor Controls:
- Locate the light control switch.
- Locate the engine shut off control.
- Locate the brake pedals and the clutch.
- Locate the PTO control.
- Locate the 3-point hitch control lever.
- Locate the hydraulic remote control levers.

Before starting the tractor ensure the following:
- Conduct all pre-start operation inspection and service according to the tractor operator’s manual.
- Make sure all guards, shields, and other safety devices are securely in place.
- The parking brake is on.
- The PTO control lever is disengaged.
- The 3-point hitch control lever is in the lowered position.
- The hydraulic remote control levers are in the neutral position.
- The tractor transmission levers are in park or neutral.

Refer to the tractor owner’s manual for tractor starting procedures. Only start the tractor while seated and belted in the tractor operator’s seat. Never bypass the ignition switch by short circuiting the starter solenoid.

After the tractor engine is running, avoid accidental contact with the tractor transmission to prevent sudden and unexpected tractor movement. **OPS-U-0028**

⚠️ **DANGER** Never run the Tractor engine in a closed building or without adequate ventilation. The exhaust fumes can be hazardous to your health. (SG-23)

⚠️ **DANGER** Start tractor only when properly seated in the Tractor seat. Starting a tractor in gear can result in injury or death. Read the Tractor operators manual for proper starting instructions. (SG-13)

5. CONNECTING THE MOWER TO THE TRACTOR

Use extreme caution when connecting the mower to the tractor. The mower should be securely resting at ground level or setting on blocks. Keep hands and feet from under the mower deck and clear of pinch points between the tractor hitch arms and mower pins. **OPS-R-0001**
5.1 Connecting the Mower-Lift Type

1. Make sure the tractor is equipped with the correct PTO shaft. Change shafts if needed.
2. Shorten or remove the tractor drawbar to avoid interference when raising and lowering the mower.
3. Board the tractor and start the engine. Position the tractor to the mower with the 3-point lift arms positioned at the same height and to the outside of the mower hitch pins. Note: Set the 3-point lift control to “Position Control” so that the lift arms maintain a constant height when attaching the mower. See the tractor Operator’s Manual for correct settings when attaching 3-point equipment.
4. Turn off the tractor engine and dismount.
5. One lift arm at a time, align arm end hole between the set of A-frame lift lugs. Insert hitch pin through the lug and arm holes and insert retaining pin into hitch pin.
6. Walk around to opposite side and repeat procedure for remaining lift arm and hitch pin.
7. Extend or retract 3-point top link to align its end hole with the holes of the mower’s top link. Insert the top link hitch pin and insert retaining pin into hitch pin.
8. Adjust any lower link check chains, guide blocks, or sway blocks to prevent the mower from swaying side to side and possible contact with tractor rear tires.
6. SETTING THE MOWER

Properly setting the cutting height is essential for efficient and safe operation. A properly set mower will make a more uniform cut, distribute clippings more evenly, require minimal tractor work, and follow the contour of uneven terrain. **NOTE:** Avoid very low cutting heights, striking the ground with the blades gives the most damaging shock loads and will cause damage to the mower and drive. Blades contacting the ground may cause objects to be thrown out from under the mower deck. Always avoid operating the mower at a height which causes the blades to contact the ground. **OPS-U- 0010**

**DANGER**

Never work under the Implement, the framework, or any lifted component unless the Implement is securely supported or blocked up to prevent sudden or inadvertent falling which could cause serious injury or even death. **(SG-14)**

6.1 Setting Mower Height- Lift Type - (Standard)

1. Park the tractor and mower on level ground.

2. Using the 3-point hitch control lever, position the front of the mower with the side skids 1” less off the ground than desired cut height. For example, for a 3” cut, position the skids 2” from the ground. Set the 3-point control lever stop at this position to maintain this height when raising and lowering the mower.

3. Shut down the tractor and remove the key.

4. Adjust the mower deck front to rear by extending or retracting the 3-point top link. Always set front of deck 3/4” lower than rear for best performance.

5. Level the mower side to side by manipulating one lower lift arm length. On most tractors, at least one of the lift arms is designed to allow for manipulation of its length. Shortening or extending will allow for deck leveling from side to side.

6. Securely block up the mower at this height.

7. Remove the bolts securing the tailwheel beam in position and allow the tailwheel to rest at ground level. Align tailwheel beam between nearest sets of holes in beam support brackets and reinstall support bolts on each side of beam. Tighten all bolts and nuts.
8. Extend the tractor’s top 3-point link so that when lifting the mower, the front of the deck will raise 2 to 2½” before the tail wheel leaves the ground. This will allow the mower to follow the contour of uneven terrain.

**Note:** Install optional check chains when there is a problem with the hydraulic 3-Point lift maintaining a set height or when a constant pre-adjusted cut height is required. See Check Chains in the Assembly Section for this accessory.
6.2 Setting Deck Pitch

**Lower Horse Power - Better Fuel Efficiency**
To increase fuel efficiency and lower horsepower requirements for mower operation, the mower should be operated with the deck approximately 3/4" LOWER IN THE FRONT THAN THE REAR. Operating the mower at this pitch will allow the mower to cut the grass only once and requires less work from the tractor.

**Increase Mulching**
To increase mulching of the grass or crop material during mower operation, the mower should be operated with the deck approximately 3/4" HIGHER IN THE FRONT THAN THE REAR. Operating the mower at this pitch will allow the mower to cut the grass twice and can result in a more even cut and improved distribution of the cut material.

*OPS-U-0041_B*

---

7. DRIVELINE ATTACHMENT

The driveline yoke and tractor PTO shaft must be dirt free and greased for attachment.

To connect the mower driveline to the tractor PTO output shaft, pull the driveline yoke collar back and align the grooves and splines of the yoke with those of the PTO shaft. Push the driveline yoke onto the PTO shaft, release the locking collar, and position the yoke until the locking collar balls are seated onto the PTO shaft. Push and pull the driveline back and forth several times to ensure a secure attachment. *OPS-R-0003_A*
When attaching the Implement input driveline to the Tractor PTO, it is important that the connecting yoke spring activated locking collar slides freely and the locking balls are seated securely in the groove on the Tractor PTO shaft. Push and pull the driveline back and forth several times to ensure it is securely attached. A driveline not attached correctly to the Tractor PTO shaft could come loose and result in personal injury and damage to the Implement. *(S3PT-17)*

### 7.1 Driveline Length Check

**WARNING** Before operating the Implement, check to make sure the Implement input driveline will not bottom out or become disengaged. Bottoming out occurs when the inner shaft penetrates the outer housing until the assembly becomes solid—it can shorten no more. Bottoming out can cause serious damage to the Tractor PTO by pushing the PTO into the Tractor and through the support bearings or downward onto the PTO shaft, breaking it off. A broken driveline can cause personal injury. *(S3PT-18)*

1. Raise and lower cutter to determine position with shortest distance between the tractor PTO shaft and gearbox input shaft. Shut down tractor PTO shaft and gearbox input shaft. Shut down tractor leaving cutter in position of shortest distance. Securely block cutter in position.
2. Pull driveline apart. Attach outer section to tractor PTO shaft. Pull on driveline section to be sure that yoke locks into place.
3. Hold driveline sections parallel to each other to determine if too long. Each section should end approximately 3” short of reaching universal joint shield on opposite section. If too long, measure 3” back from universal joint shield and mark on opposite section. Do this for both sections.
4. Do this for both sections.
5. Raise and lower cutter to determine position with greatest distance between PTO shaft and gearbox input shaft. Shut down tractor leaving cutter in position of greatest distance. Securely block cutter in position.
6. Hold driveline sections parallel to each other and check for minimum 6” overlap. If driveline has been marked for cutting, overlap will be the distance between two marks. If driveline has less than minimum overlap, do not use. Contact authorized Bush Hog dealer.

**NOTE:** If driveline is the correct length, omit the following steps 8 - 11 and proceed to step 12.
7. Clamp driveline in a well padded vice to prevent damage to the shield. Cut off shield where marked.

8. Using cut off section of shield as a guide, cut shaft the same amount.

9. Repeat steps for other driveline section.

10. Deburr ends of driveline sections and clean away all chips and filings.

11. Apply multi-purpose grease to inside of outer driveline section. Assemble driveline and install on tractor and cutter. Pull on each driveline section to be sure yokes lock into place. Make certain driveline shielding is in place and in good condition.

12. Adjust lower lift arm(s) to level cutter right to left. Refer to tractor operator’s manual for instructions.

**WARNING**

Before operating the Implement, check to make sure the Implement input driveline will not bottom out or become disengaged. Bottoming out occurs when the inner shaft penetrates the outer housing until the assembly becomes solid—it can shorten no more. Bottoming out can cause serious damage to the Tractor PTO by pushing the PTO into the Tractor and through the support bearings or downward onto the PTO shaft, breaking it off. A broken driveline can cause personal injury. (S3PT-18)
8. PRE-OPERATION INSPECTION AND SERVICE

Before each use, a pre-operation inspection and service of the implement and tractor must be performed. This includes routine maintenance and scheduled lubrication, inspecting that all safety devices are equipped and functional, and performing needed repairs. DO NOT operate the unit if the pre-operation inspection reveals any condition affecting safe operation. Perform repairs and replacement of damaged and missing parts as soon as noticed. By performing a thorough pre-operation inspection and service, valuable down time and repair cost can be avoided. *OPS-U-0029*

Always disconnect the main PTO Driveline from the Tractor before performing service on the Implement. Never work on the Implement with the tractor PTO driveline connected and running. Rotating Parts, Blades or Drivelines could turn without warning and cause immediate entanglement, injury or death. *(S3PT-11)*

Periodically inspect all moving parts for wear and replace when necessary with authorized service parts. Look for loose fasteners, worn or broken parts, and leaky or loose fittings. Make sure all pins have cotter pins and washers. Serious injury may occur from not maintaining this machine in good working order. *(SG-21)*

**WARNING**

Non-genuine parts can fail catastrophically. TO AVOID SERIOUS INJURY OR DEATH:
- ONLY use genuine Bush Hog replacement parts.
- Non-genuine parts can fail creating hazardous conditions for operator and bystanders.

Contact local dealer or Bush Hog about repair parts at:
2501 Griffin Ave., Selma, AL 36701
Customer Service: 800-363-6096
Email: contactus@bushhog.com  www.algqr.com/bpm

**WARNING**

Cancer and Reproductive Harm
www.P65.Warnings.ca.gov

**IMPORTANT**

BE AWARE  BE ALERT  BE ALIVE  Before Operating this Mower

To prevent serious injury to yourself and/or bystanders, be trained in Safe Mowing Practices. Alamo Group Companies as well as AEM and FEMA provide training material that is critical for your Safety and the Safety of others when operating this equipment. Make these Safety Procedures an important part of every workday. Read and understand the Operator’s Manual.

Do not let untrained individuals operate this equipment. Contact your Dealer, AEM (www.aem.org), FEMA (314-878-2304, www.FarmEquip.org), or Alamo Group (www.Alamo-Group.com) for information on training material or courses that provide training in Safer Operating Practices for Mowers.

www.algqr.com/bve

© 2019 Alamo Group Inc.
8.1 Tractor Pre-Operation Inspection/Service

Refer to the tractor operator’s manual to ensure a complete pre-operation inspection and scheduled service is performed according to the manufacturers recommendations. The following are some of the items that require daily service and inspection:

- Tire condition/air pressure
- Wheel lug bolts
- Steering linkage
- PTO shield
- SMV sign is clean and visible
- Tractor’s lights are clean and functional
- Tractor Seat belt is in good condition
- Tractor ROPS is in good condition
- ROPS is in the raised position
- No tractor oil leaks
- Radiator free of debris
- Engine oil level and condition
- Engine coolant level and condition
- Power brake fluid level
- Power steering fluid level
- Fuel condition and level
- Sufficient lubrication at all lube points
- Air filter condition

OPS-U-0030

8.2 Mower Pre-Operation Inspection/Service

Before each mower use, a complete inspection and service is required to ensure the mower is in a good and safe working condition. Damaged and/or broken parts should be repaired and/or replaced immediately. To ensure the mower is ready for operation, conduct the following. OPS-R-0007

The operator’s manual and safety signs affixed on the unit contain important instructions on the safe and proper use of the equipment. Maintain these important safety features on the implement in good condition to ensure the information is available to the operator at all times.

- Ensure the manual canister is secured to the equipment with the operator’s manual inside.
- Ensure all safety signs are in place and legible. Replace missing, damaged, and illegible decals. OPS-U-0011
• Perform scheduled lubrication as detailed in the maintenance section.
• Ensure all safety signs are in place and legible.
• Ensure the driveline is securely attached to tractor. Make sure the driveline yoke locking collar is securely seated in the grooves of the PTO shaft by pushing and pulling the yoke several times.
• Inspect that the 3-point hitch pins are the proper size, correctly installed, and secured to the tractor lift arms with retaining pins inserted. 

• Ensure deflectors and/or chainguards are in position and not damaged. Replace worn, broken, and missing pieces.

**DANGER**

All Safety Shields, Guards and Safety devices including (but not limited to) - the Deflectors, Chain Guards, Steel Guards, Gearbox Shields, PTO integral shields, and Retractable Door Shields should be used and maintained in good working condition. All safety devices should be inspected carefully at least daily for missing or broken components. Missing, broken, or worn items must be replaced at once to reduce the possibility of injury or death from thrown objects, entanglement, or blade contact. (SGM-3)
• Lift Type-Ensure the tailwheel support bolts are properly installed and tightened.
• Inspect all bolts and screws and tighten to the recommended torque.  *OPS-R-0039_H*

• Ensure the tractor PTO master shield and the mower slip clutch shield are in place, lowered, and in good condition.
• Ensure the driveline integral shield is in good condition and rotates freely.
• Ensure the driveline slip clutch (if equipped) is properly adjusted.  *OPS-R-0039*

• Inspect the gearbox oil level. A low oil level is a warning sign that the gearbox may be cracked or its seal is damaged and needs replacement.
• Ensure the gearbox vent is in place and free from clogs.  *OPS-R-0040_B*
- Inspect blades and blade bolts for looseness and excessive wear. Make sure the mower is securely blocked up before crawling beneath. Replace damaged, worn and missing blades as complete sets to maintain rotary balance during operation.
- Ensure blade pan nut is tightened with the cotter pin inserted and spread. *OPS-R-0041*

### 8.3 Cutting Component Inspection
Inspect blade pan and blade assembly for the following:

**Damaged Pan**
*Cause: Blade Pan contacts an immovable object while mower was in motion.*
*Remedy: Inspect the area before mowing to determine where the immovable objects are located and place visible hazard markers to identify the areas. Avoid mowing in the area where immovable foreign objects exist.*

**Notches and Gouges**
*Cause: Blade contacting foreign objects*
*Remedy: Inspect the area to be mowed and remove foreign objects that could cause damage to the blades*

**Excessive Blade Wear**
*Cause: Mower height set too low. Blade used past intended life.*
*Remedy: Replace blades more often. Adjust mower height for mowing Conditions to eliminate blade-to-ground contact*
Operating the mower with loose blade hardware will damage the blade holder or blades and can result in blade breakage or blade fastener failure. Broken blades or bolts can be thrown out from under the mower for distances up to 300 feet. When the blades are replaced, the fastening hardware must be replaced. Check and retighten the blade hardware after the first eight hours of operation. In severe cutting conditions, recheck the blade carrier and blade bolt torque every 50 hours.

**WARNING**
To help prevent structural damage caused by loose hardware, tighten gearbox mounting hardware as specified. Check the fastener torque after first 8 hours of use and every 50 hours thereafter.
Inspect the Blades daily for abnormal wear. REPLACE BOTH BLADES on that carrier IMMEDIATELY if either blade has:

- Become bent or deformed from it’s original shape or
- Any cracks are visible, or
- Deep gouges in the blade’s surface are present, or
- Gouges or chipped areas in the cutting edge are larger than 1/2" (12.7mm), or
- The material on the leading edge has been worn away by more than 1/2 (12.7mm)"

Failure to replace abnormally worn blades may lead to catastrophic failure of the blades and ejection of the broken part with tremendous force which may cause serious bodily injury or death. OPS-U-0032
8.4 Blade Bolt Inspection

Inspect Blade Bolt Head daily for wear as followed:

**Excessive Blade Bolt Wear**
*Cause:* Blade Bolt contacts a foreign or solid object while Blade is in motion.

*Remedy:* Inspect the area before mowing to determine where the foreign objects are located and place visible hazard markers to identify the areas where immovable foreign objects exist, and avoid hitting the objects.

**Notches and Gouges**
*Cause:* Blade Bolt contacting foreign objects.

*Remedy:* Inspect area to be mowed and remove foreign objects that could cause damage to the blade bolt.

---

**DANGER**

Inspect the Blade Bolt Heads daily for abnormal wear. REPLACE BOTH BLADE BOLTS on the Blades IMMEDIATELY if either blade bolts has:

- Visible cracks or
- If the recessed area on blade bolt is worn off or
- If Blade Bolt has gouges or chipped areas.

Failure to replace abnormally worn blade bolts may lead to catastrophic failure of the blades and ejection of the broken part which may cause serious bodily injury or death.

**Always replace Blade Bolts with new bolts whenever replacing the Blades.** *OPS-U-0037*
Rotary Mower PRE-OPERATION Inspection

Mower ID#________________ Make ____________________
Date: ________________ Shift ____________________

**WARNING**
Before conducting the inspection, make sure the tractor engine is off, all rotation has stopped and the tractor is in park with the parking brake engaged. Make sure the mower is resting on the ground or securely blocked up and all hydraulic pressure has been relieved.

Operator’s Signature:___________________________________________________

DO NOT OPERATE an UNSAFE TRACTOR or IMPLEMENT
9. DRIVING THE TRACTOR AND IMPLEMENT

Safe tractor transport requires the operator possess a thorough knowledge of the model being operated and precautions to take while driving with an attached implement. Ensure the tractor has the capacity to handle the weight of the implement and the tractor operating controls are set for safe transport. To ensure safety while driving the tractor with an attached implement, review the following. **OPS-U-0012**

**DANGER**

Never run the Tractor engine in a closed building or without adequate ventilation. The exhaust fumes can be hazardous to your health. *(SG-23)*

**WARNING**

Transport only at speeds where you can maintain control of the equipment. Serious accidents and injuries can result from operating this equipment at high speeds. Understand the Tractor and Implement and how it handles before transporting on streets and highways. Make sure the Tractor steering and brakes are in good condition and operate properly.

Before transporting the Tractor and Implement, determine the proper transport speeds for you and the equipment. Make sure you abide by the following rules:

Test the tractor at a slow speed and increase the speed slowly. Apply the Brakes smoothly to determine the stopping characteristics of the Tractor and Implement. As you increase the speed of the Tractor the stopping distance increases. Determine the maximum transport speed not to exceed 20 mph (30 kph) for transporting this equipment.

Test the equipment at a slow speed in turns. Increase the speed through the turn only after you determine that the equipment can be operated at a higher speed. Use extreme care and reduce your speed when turning sharply to prevent the tractor and implement from turning over. Determine the maximum turning speed for you and this equipment before operating on roads or uneven ground.

Only transport the Tractor and Implement at the speeds which allow you to properly control the equipment.

Be aware of the operating conditions. Do not operate the Tractor with weak or faulty brakes or worn tires. When operating down a hill or on wet or rain slick roads, the braking distance increases: use extreme care and reduce your speed. When operating in traffic always use the Tractor’s flashing warning lights and reduce your speed. Be aware of traffic around you and watch out for the other guy. *(SG-19)*
9.1 Starting the Tractor
The procedure to start the tractor is model specific. Refer to the tractor operator’s manual for starting procedures for your particular tractor. Consult an authorized dealer if the starting procedure is unclear. Ensure the 3-point control lever is in the lowered position and the PTO is disengaged before starting the tractor. **OPS-U-0033**

9.2 Brake and Differential Lock Setting
Make sure the tractor brakes are in good operating condition. Tractor brakes can be set to operate independently allowing single rear wheel braking action or locked together to provide simultaneous rear wheel braking. **FOR MOST DRIVING AND OPERATING CONDITIONS, THE BRAKE PEDALS SHOULD BE LOCKED TOGETHER TO PROVIDE THE MOST EFFECTIVE BRAKING ACTION.**

Always disengage the tractor differential lock when turning. When engaged the differential lock will prevent or limit the tractor from turning. During normal cutting conditions, locking the differential provides no benefit and should not be used. **OPS-U-0013**

**WARNING**
Be aware of the operating conditions. Do not operate the Tractor with weak or faulty brakes. When operating down a hill or on wet or rain slick roads, the braking distance increases; use extreme care and reduce your speed in these conditions. When operating in traffic, always use the Tractor’s flashing warning lights and reduce your speed. Be aware of traffic around you and watch out for the other guy.
9.3 Raising the Mower
Using the tractor 3-point hitch control lever, raise the mower off the ground about 6”, or just high enough to clear any ground obstacles. When raising the mower, make sure all connection points are securely attached and at least 1” clearance is maintained between the driveline and the deck. If necessary, place an upper lift stop on the 3-point hitch control lever to limit the height the mower can be raised to avoid driveline damage. *OPS-R-0042*

9.4 Driving the Tractor and Mower
Start off driving at a slow speed and gradually increase your speed while maintaining complete control of the tractor and mower. Moving slowly at first will also prevent the tractor from rearing up and loss of steering control. The tractor should never be operated at speeds that cannot be safely handled or which will prevent the operator from stopping quickly during an emergency. If the power steering or engine ceases operating, stop the tractor immediately as the tractor will be difficult to control.

Perform turns with the tractor and mower at slow speeds to determine how the tractor with an attached mower handles a turn. Determine the safe speed to maintain proper control of the tractor when making turns. When turning with a towed implement, the overall working length of the unit is increased. Allow additional clearance for the mower when turning.

To avoid overturns, drive the tractor with care and at safe speeds, especially when operating over rough ground, crossing ditches or slopes, and turning corners. Tractor wheel tread spacing should be increased when working on inclines or rough ground to reduce the possibility of tipping.

Use extreme caution when operating on steep slopes. Keep the tractor in a low gear when going downhill. DO NOT coast or free-wheel downhill. *OPS-R-0019*
9.5 Crossing Ditches and Steep Inclines

When crossing ditches with steep banks or going up sharp inclines, it is possible that the main driveline inner profile will penetrate into the outer housing to its maximum depth until the assembly becomes solid (driveline is at its extreme shortest length). This type of abusive operation can cause serious damage to the tractor and mower drive by pushing the PTO into the tractor and through the support bearings or downward onto the PTO shaft, breaking it off.

**WARNING** Damage resulting from over-collapse of the driveline's inner profile and its outer housing may allow the driveline to come loose from the Tractor which could cause bodily injury to the operator or bystanders and/or extensive damage to the Tractor or Implement. *OPS-R-0020*

When confronted with an incline or ditch, do not approach from an angle which is perpendicular or straight on as damaged to over collapse of the driveline may occur.
When crossing such terrain, the implement should be fully lowered for a lower center of gravity and added stability. *OPS-R-0021*
Inclines and ditches should be approached along a line which is at an angle as shown. This type of path will reduce the possibility of over-collapse of the driveline and resulting damage. If the gradient is so steep that such an approach increases the possibility of a tractor roll-over, select an alternate crossing path.

When operating the tractor and mower across slopes and inclines, through ditches, and other uneven terrain conditions, it is important to maintain sufficient deck to ground clearance. Blade contact with the ground may cause soil, rocks and other debris to be thrown out from under the mower resulting in possible injury and/or property damage. Ground contact also produces a severe shock load on the mower drive and to the mower blades resulting in possible damage and premature wear. 

**OPS-R-0022**

**10. OPERATING THE TRACTOR AND IMPLEMENT**

**THE OPERATOR MUST COMPLETELY UNDERSTAND HOW TO OPERATE THE TRACTOR AND IMPLEMENT AND ALL CONTROLS BEFORE ATTEMPTING TO OPERATE.** The operator must read and understand the Safety and Operation Sections of the implement and tractor operator’s manuals. These manuals must be read and explained to any operator who cannot read. Never allow someone to operate the implement and tractor without complete operating instructions.

Before starting any operation, the operator must become familiar with the area to be worked in and any obstacles and hazards contained within to ensure safety to the operator, bystanders, and equipment. Special attention should be paid to foreign debris, rough terrain, steep slopes, and passersby and animals in the area. 

**OPS-U-0015**

**WARNING** Extreme care should be taken when operating near loose objects such as gravel, rocks, wire, and other debris. Inspect the area before mowing. Foreign objects should be removed from the site to prevent machine damage and/or bodily injury or even death. Any objects that cannot be removed must be clearly marked and carefully avoided by the operator. Stop mowing immediately if blades strike a foreign object. Repair all damage and make certain rotor or blade carrier is balanced before resuming mowing. (SGM-05)
OPERATION

Many varied objects, such as wire, cable, rope, or chains, can become entangled in the operating parts of the mower head. These items could then swing outside the housing at greater velocities than the blades. Such a situation is extremely hazardous and could result in serious injury or even death. Inspect the cutting area for such objects before mowing. Remove any like object from the site. Never allow the cutting blades to contact such items. (SGM-06)

10.1 Foreign Debris Hazards
Before mowing, inspect the area to make sure there are no foreign objects that the mower blades could hit or become entangled with. Remove all foreign objects and debris. If objects are too big to remove, mark them clearly and be sure to prevent the mower blades from contacting them.

If you hit a solid object or foreign debris, stop the mower and tractor at once. Immediately idle the engine speed and disengage the PTO. Wait for all mower rotating motion to stop, then raise the mower and move the tractor and implement off the object. Inspect the area and remove, or mark the location of the debris. Inspect the condition of the mower and make any needed repairs immediately. Make sure the blades are not damaged and the carrier is balanced before resuming operation.

Always wear your seat belt securely fastened and only operate the tractor and mower with the ROPS in the raised position. If the tractor or mower hits a tree stump, rock, or bump, a sudden movement could throw you off of the seat and under the tractor and/or mower. The seat belt is your best protection from falling off the tractor and the ROPS provides protection from being crushed during a tractor roll-over. OPS-R-0023

10.2 Bystanders/Passersby Precautions
If a bystander comes within 300 feet of the tractor while the mower is being operated, stop the tractor at once, idle the engine and disengage the PTO. Do not engage the PTO again until all bystanders are well past the 300 foot distance. OPS-R-0024
**DANGER**  Rotary Mowers are capable under adverse conditions of throwing objects for great distances (300 feet or more) and causing serious injury or death. Follow safety messages carefully.

STOP MOWING IF PASSERSBY ARE WITHIN 300 Feet UNLESS:
- Front and Rear Deflectors, Chain Guards, or Bands are installed and in good, workable condition;
- Mower sections or Wings are running close to and parallel to the ground without exposed Blades;
- Passersby are outside the existing thrown-object zone;
- All areas have been thoroughly inspected and all foreign material such as rocks, cans, glass, and general debris has been removed.

**NOTE:** Where there are grass and weeds high enough to hide debris that could be struck by the blades, the area should be: inspected and large debris removed, mowed at an intermediate height, inspected, closely with any remaining debris being removed, and mowed again at desired final height. (This will also reduce power required to mow, reduce wear and tear on the Mower drivetrain, spread cut material better, reduce streaking, and make the final cut more uniform).  (SRM-01)

---

10.3 Engaging the Power Take Off (PTO)

Before engaging the PTO, make certain that the area is clear of bystanders and passersby. The implement must be completely lowered and the deck positioned at a safe operating height. NEVER engage the PTO with the implement in the raised position.

Set the tractor engine speed at approximately 1,000 RPM before engaging the PTO. Shift the PTO control to the on position, and slowly increase the engine speed until the PTO is operating at the rated speed. If you hear unusual noises or see or feel abnormal vibrations, disengage the PTO immediately. Inspect the implement to determine the cause of the noise or vibration and repair the abnormality.  **OPS-U- 0027**

**WARNING** Do not let the Blades turn when the Mower Deck is raised for any reason, including clearance or for turning. Raising the Mower deck exposes the Cutting Blades which creates a potentially serious hazard and could cause serious injury or even death from objects thrown from the Blades.  (SRM-07)

**WARNING** Do not put hands or feet under mower decks. Blade Contact can result in serious injury or even death. Stay away until all motion has stopped and the decks are securely blocked up.  (SGM-09)
10.4 PTO RPM and Ground Speed

Ground speed for mowing will depend upon the height, type, and density of vegetation to be cut. Recommended speed for efficient mower performance is between 2 and 5 mph (3-8 kph). Operate the mower at its full rated PTO speed to maintain blade speed for a clean cut. Refer to the tractor operator’s manual or the tractor instrument panel for the engine speed and gear to provide the required PTO and desired ground speed. Make sure that the mower is operating at its full rated speed before entering the vegetation to be cut. If it becomes necessary to temporarily regulate engine speed, increase or decrease the throttle gradually.

Ground speed is achieved by transmission gear selection and not by the engine operating speed. The operator may be required to experiment with several gear range combinations to determine the best gear and range which provides the most ideal performance from the mower and most efficient tractor operation. As the severity of cutting conditions increase, the ground speed should be decreased by selecting a lower gear to maintain the proper operating PTO speed. **OPS-R-0025**

**WARNING**

Do not exceed the rated PTO speed for the Implement. Excessive PTO speeds can cause Implement driveline or blade failures resulting in serious injury or death. **(SG-26)**

**WARNING**

Mow at the speed that you can safely operate and control the tractor and mower. The correct mowing speed depends on terrain condition and grass type, density, and height of cut. Normal ground speed range is from 2 to 5 mph (3-8 kph). Use slow mowing speeds when operating on or near steep slopes, ditches, drop-offs, overhead obstructions, power lines, or when debris and foreign objects are to be avoided. **(SGM-07)**

10.5 Operating the Mower

Only operate the mower from the tractor operator’s seat with the seatbelt securely fastened. The tractor must be equipped with a ROPS in the raised position or a ROPS cab.

The mower is designed to cut vegetation up to 2” in diameter. Sharp blades will produce a cleaner cut and require less power. Travel at a speed that allows the mower sufficient time to cut through the vegetation and maintain the PTO operating speed to prevent overloading the mower and tractor. Choose a driving pattern that provides the maximum pass length and minimizes turning.

Under certain conditions, tractor tires may roll some grasses down preventing them from being cut at the same height as the surrounding area. When this occurs, reduce the tractor ground speed while maintaining the operating speed of the mower. A slower ground speed will permit grasses to at least partially rebound and be cut. Taking a partial cut and/or reversing the direction of travel may also help produce a cleaner cut.

Avoid mowing in the reverse direction when possible. In situations where the mower must be backed to access areas to be cut, make sure there are no persons or other foreign debris behind the mower before mowing in reverse. When mowing in reverse, operate the tractor and mower at a reduced ground speed to ensure tractor and mower control is maintained.

**WARNING**

Do not mow with two machines in the same area except with Cab tractors with the windows closed. **(SGM-11)**
Mow only in conditions where you have clear visibility in daylight or with adequate artificial lighting. Never mow in darkness or foggy conditions where you cannot clearly see at least 300 feet (90 m) in front and to the sides of the tractor and mower. Make sure that you can clearly see and identify passersby, steep slopes, ditches, drop-offs, overhead obstructions, power lines, debris and foreign objects. If you are unable to clearly see these type of items discontinue mowing. (SGM-1)

Avoid mowing in reverse direction when possible. Check to make sure there are no persons behind the mower and use extreme care when mowing in reverse. Mow only at a slow ground speed where you can safely operate and control the tractor and mower. Never mow an area that you have not inspected and removed debris or foreign material. (SGM-08)

Follow these guidelines to reduce the risk of equipment and grass fires while operating, servicing, and repairing the Mower and Tractor:

- Equip the Tractor with a fire extinguisher in an accessible location.
- Do Not operate the Mower on a Tractor with an underframe exhaust.
- Do Not smoke or have an open flame near the Mower and Tractor.
- Do Not drive into burning debris or freshly burnt areas.
- Ensure slip clutches are properly adjusted to prevent excessive slippage and plate heating.
- Never allow clippings or debris to collect near drivelines, slip clutches, and gearboxes. Periodically shut down the Tractor and Mower and clean clippings and collected debris from the mower deck. (SGM-12)

When you get to the end of a pass, slightly raise the mower (2-4”) before turning. Never raise the mower entirely while the blades are turning. If the mower must be raised higher than 12” from ground level, disengage the tractor PTO and wait for all mower rotation to come to a complete stop before proceeding to raise the mower.

When turning, the angle between the tractor and mower should not be so great that a clattering of the U-joints occurs. Sharp turns can cause premature failure of the joints and place pressure on the tractor PTO shaft and could cause extensive mechanical damage to the mower and tractor. 

OPS-R-0027_A
Do not let the Blades turn when the Mower Deck is raised for any reason, including clearance or for turning. Raising the Mower deck exposes the Cutting Blades which creates a potentially serious hazard and could cause serious injury or even death from objects thrown from the Blades. (SRM-07)

Large, dense, or wet vegetation may need to be mowed in two or more passes to achieve a uniform cut. In such conditions, raise the cutting height to 12” or more on the first pass. OPS-R-0043

Then lower the mower to the desired height and mow the vegetation a second time. If possible, select a mowing pattern that is at a 90 degree angle to the first pass to reduce streaking for a more uniform cut. OPS-R-0044

Stay alert and watch for trees, low hanging limbs, power lines, and other overhead obstacles and solid ground objects while you are operating. Use care to avoid hitting these items. OPS-R-0028_A
Do not mow, or drive the tractor into material that is burning, or areas that recently burnt and may contain hot spots. Burning material, sparks, and coals could be thrown from the mower to areas of vegetation that might ignite. Tire damage can occur when driving over hot material. Oil and grease on the tractor and mower could ignite resulting in equipment destruction. Carry a fire extinguisher on the tractor at all times to extinguish possible fires encountered.

10.6 Right of Way (Highway) Mowing

- **USE DOUBLE CHAIN GUARDS** for highway, right-of-way, parks, greenbelt mowing, or all other mowing where human dwellings, vehicles, or livestock could be within 300 feet of the mower.
- No shielding is 100% effective in preventing thrown objects. To Reduce Possibility of Injury:
  9. **MAINTAIN MOWER SHIELDING** in good operational condition,
  10. **DAILY INSPECT** the condition of the Thrown Object Guards, mower Side Skirts, and skid shoes: Replace or repair worn or damaged guards.
  11. **DAILY INSPECT** the condition of the Blades and Blade Bolts. Replace any cracked, worn, bent or damage blades. Always replace blade bolts and nuts when replacing blades. Make sure the blade bolts are properly tightened.
  12. **RAISE CUTTING HEIGHT** to 6 INCHES minimum.
  13. **INSPECT AREA** thoroughly before mowing to REMOVE potential THROWN OBJECT HAZARDS.
  14. **NEVER ALLOW BLADES** to CONTACT SOLID OBJECTS like wire, rocks, posts, curbs, guardrails, or ground while mowing.

**DANGER**

ROTARY MOWERS CAN THROW OBJECTS 300 FEET OR MORE UNDER ADVERSE CONDITIONS.

TO AVOID SERIOUS INJURY OR DEATH TO OPERATOR OR BYSTANDERS FROM THROWN OBJECTS:

**INSPECT AREA FOR POTENTIAL THROWN OBJECTS BEFORE MOWING:**

- **REMOVE** debris, rocks, wire, cable, metal objects and other foreign material from area. Wire, cable, rope, chains and metal objects can be thrown or swung outside deck with great velocity:
  1. **MARK** objects that cannot be removed.
  2. **AVOID** these objects when mowing.

**STOP MOWING IF PASSERSBY IS WITHIN 300 FEET UNLESS:**

- All **THROWN OBJECT SHIELDING** including Front and Rear Deflectors, Chain Guards, Steel Guards, Bands, Side Skirts and Skid Shoes are in place and in good condition when mowing.
- Mower sections or wings are adjusted to be close and parallel to ground without exposing blades.
- **MOWING AREA** has been inspected and foreign materials and debris have been removed.
- **PASSERSBY** are inside enclosed vehicle.  

OPS-U-0040
10.7 Shutting Down the Implement
To shut down attached mower head, first bring the tractor to a complete stop. Decrease engine RPM to idle then disengage cutterhead. The mower head will come to a complete stop within a suitable amount of time. Do not engage or disengage the cutterheads at a high RPM unless there is an emergency situation.

Park the tractor on a level surface, place the transmission in park or neutral and apply the parking brake, lower the attached implement to the ground, shut down the engine, remove the key, and wait for all motion to come to a complete stop before exiting the tractor. *OPS-U- 0016*

11. DISCONNECTING THE MOWER FROM THE TRACTOR
Before disconnecting the mower, the PTO must be disengaged and blade rotation at a complete stop. Move the mower to a level storage location and lower it to the ground. If the mower is not resting securely on the ground, block the mower up securely before attempting to disconnect it from the tractor.

Use extreme care to keep feet and hands from under the mower and clear of any pinch points caused by the tractor hitch arms and mower pins. *OPS-R-0030_A*

Never stand or allow another person to stand between a running Tractor and the Mower when disconnecting the Implement from the Tractor 3-point hitch.
Always shut the Tractor completely down, place the transmission in park, and set the parking brake before you or anyone else attempts to connect or disconnect the Implement and Tractor hitches. (S3PT-15)

Never unhitch without using the Tongue Jack. The Tongue is very heavy. Attempting to lift the Tongue without using the Tongue Jack could cause strains or other injury. Allowing the tongue to fall suddenly and unexpectedly could result in crushing injury. Use the Tongue Jack for lifting the Implement only. Overloading the Tongue Jack can cause failure with possible serious bodily injury or even death. (STI-04)

To disconnect the mower first extend the tractor 3-point hitch top link to remove tension on the top link hitch pin. When the pin is loose and easy to rotate, remove the pin from the mower.

After disconnecting the 3 lift points, remove the mower driveline from the tractor PTO shaft. Lay the driveline down carefully to avoid damaging the driveline or its shield. Do not let the driveline fall into mud or dirt, which can contaminate the bearing and shorten the life of the driveline. OPS-R-0031_N
12. MOWER STORAGE

Properly preparing and storing the mower at the end of the season is critical to maintaining its appearance and to help ensure years of dependable service. The following are suggested storage procedures:

- Thoroughly clean all debris off the mower to prevent damage from rotting grass and standing water.
- Lubricate all mower grease points and fill gearbox oil levels as detailed in the maintenance section.
- Tighten all bolts and pins to the recommended torque.
- Check the mower for worn and damaged parts. Perform repairs and make replacements immediately so that the mower will be ready for use at the start of the next season.
- Store the mower in a clean, dry place with the mower housing resting securely on blocks or at ground level.
- Keep the driveline yoke from sitting in water, dirt and other contaminants.
- Use spray touch-up enamel where necessary to prevent rust and maintain the appearance of the mower.

It is critical that driveline clutches slip when an obstacle or heavy load is encountered to avoid mower and/or tractor damage. If the mower sits outside for an extended period of time or is exposed to rain and/or humid air, the clutch lining plates must be inspected to ensure they are not frozen together from rust or corrosion. If the mower has been exposed to such conditions, at the start of each mowing season, and any time it is suspected that the slip clutch plates may be frozen together, readjust the slip clutch as detailed in Seasonal Clutch Maintenance of the maintenance section in this manual. **OPS-R-0032_A**

---

**DANGER**

Never allow children or other persons to ride on the Tractor or Implement. Falling off can result in serious injury or death. **(SG-10)**

13. TRANSPORTING THE TRACTOR AND IMPLEMENT

Inherent hazards of operating the tractor and implement and the possibility of accidents are not left behind when you finish working in an area. Therefore, the operator must employ good judgement and safe operation practices when transporting the tractor and implement between locations. By using good judgement and following safe transport procedures, the possibility of accidents while moving between locations can be substantially minimized. **OPS-U-0017**
Before transporting the tractor and mower, idle the tractor engine, disengage the PTO and wait for all mower moving parts to come to a complete stop. Once all mower parts are completely stopped, raise the mower to transport height. **NOTE:** When raising the mower, maintain 1” clearance between the driveline and mower deck. If additional mower deck height is needed for safe transport, disconnect the driveline from the tractor and secure its end to the mower deck. The mower can then be raised to the maximum lift height. *OPS-R-0033_A*

If the tractor’s hydraulic pump is not independent of the tractor PTO, or if the tractor PTO has to be run to have hydraulic power, disconnect the mower driveline from the tractor PTO output shaft. Secure the driveline to the mower deck to prevent driveline damage or loss during transport. *OPS-R-0034*

### 13.1 Transporting on Public Roadways

Extreme caution should be used when transporting the tractor and implement on public roadways. The tractor must be equipped with all required safety warning features including a SMV emblem and flashing warning lights to alert drivers of the tractor's presence. Remember that roadways are primarily designed for automotive drivers and most drivers will not be looking out for you, therefore, you must look out for them. Check your side view mirrors frequently and remember that vehicles will approach quickly because of the tractor’s slower speed. Be extremely cautious when the piece of equipment that you are towing is wider than the tractor tire width and/or extends beyond your lane of the road.

Make sure that a proper size safety tow chain is secured between the tractor and implement before entering a public road. *OPS-U-0019*

**WARNING**

Make certain that the “Slow Moving Vehicle” (SMV) sign is installed in such a way as to be clearly visible and legible. When transporting the Equipment use the Tractor flashing warning lights and follow all local traffic regulations. *(SG-6)*
The SMV (Slow-Moving Vehicle) emblem is universal symbol used to alert drivers of the presence of equipment traveling on roadways at a slow speed. SMV signs are a triangular bright orange with reflective red trim for both easy day and night visibility. Make sure the SMV sign is clean and visible from the rear of the unit before transporting the tractor and implement on a public roadway. Replace the SMV emblem if faded, damaged, or no longer reflective. OPS-U-0020

Make sure that all tractor flashing warning lights, headlights, and brake/tail lights are functioning properly before proceeding onto public roads. While newer model tractors have plenty of lighting to provide warning signals and operating lighting, most older models are only equipped with operating lights. Consult an authorized tractor dealer for lighting kits and modifications available to upgrade the lighting on older tractor models. OPS-U-0021

When operating on public roads, have consideration for other road users. Pull to the side of the road occasionally to allow all following traffic to pass. Do not exceed the legal speed limit set in your country for agricultural tractors. Always stay alert when transporting the tractor and implement on public roads. Use caution and reduce speed if other vehicles or pedestrians are in the area. OPS-U-0022_A
13.2 Hauling the Tractor and Implement

Before transporting a loaded tractor and implement, measure the height and width dimensions and gross weight of the complete loaded unit. Ensure that the load will be in compliance with the legal limits set for the areas that will be traveled through.

Use adequately sized and rated trailers and equipment to transport the tractor and implement. Consult an authorized dealer to determine the proper equipment required. Using adequately sized chains, heavy duty straps, cables and/or binders, securely tie down both the front and rear of the tractor utilizing the proper tie down locations as specified by the tractor manufacturer.

Arrange the chains so that when tightened, the chains are pulling downward and against themselves. Carefully tighten the securing chains or other fasteners using boomers or binders to apply maximum tension. Use extreme care when attaching and removing the securing devices as the extreme tension involved when released has the potential to inflict serious injury.

While hauling the tractor and implement, make occasional stops to check that the tractor and implement have not moved or shifted and that the securing chains have maintained tension. If during transport a hard braking, sharp turning, or swerving action was performed, stop at the next safe location to inspect the security of the load.
### 14. TROUBLE SHOOTING GUIDE

## HAZARDS WITH MAINTENANCE OF IMPLEMENT

<table>
<thead>
<tr>
<th>Periodically inspect all moving parts, lubricate drivelines, and tighten all fasteners</th>
<th>Stop engine remove key before conducting maintenance</th>
<th>Block up implement before servicing Use large blocks on soft or wet soil</th>
<th>Engage cylinder transport locks</th>
<th>Inspect Blades for damage or cracks</th>
</tr>
</thead>
</table>

### WARNING

Avoid serious injury or death from component failure by keeping implement in good operating condition in performing proper service, repairs and maintenance.

**BEFORE PERFORMING SERVICE, REPAIRS AND MAINTENANCE ON THE IMPLEMENT:**

- **SECURE EQUIPMENT FOR SERVICE**
  - Block out potential energy hazards; Rotating Parts, Raised Components, Hydraulic Pressure.
  - **STOP ENGINE**, engage parking brake and allow all moving parts to stop and remove key before dismounting from tractor seat.
  - **PLACE** implement on ground or securely block up raised equipment. Use large blocks on soft or wet soil.
  - **PUSH and PULL** Remote Hydraulic Cylinder lever to relieve hydraulic pressure.
  - **DISCONNECT IMPLEMENT** driveline from tractor PTO Shaft.

**WEAR SAFETY GLASSES, PROTECTIVE GLOVES** and follow **SAFETY PROCEDURES** when performing service, repairs and maintenance on the implement:

- Always **WEAR** protective GLOVES when handling chemicals or worn component with sharp edges.
- Always **WEAR GLOVES** and **SAFETY GLASSES** when servicing components.
- **AVOID CONTACT** with hot hydraulic oil tanks, pumps, motors, valves and hose connection surfaces.
- **SECURELY** support or **BLOCK UP** raised implement, framework and lifted components before working underneath equipment.
- **STOP** any implement movements and **SHUT-OFF TRACTOR** engine before doing any work procedures.
- **USE** ladder or raised stands to reach high equipment areas inaccessible from ground.
- **ENSURE** good footing by standing on solid flat surfaces when getting on implement to perform work.
- **FOLLOW** manufacturer's instructions in handling oils, solvents, cleansers, and other chemical agents.
- **DO NOT** change any factory-set hydraulic calibrations to avoid component or equipment failures.
- **DO NOT** modify or alter implement, functions or components.
- **DO NOT WELD** or repair rotating mower components. These may cause vibrations and component failures being thrown from mower.

**PERFORM SERVICE, REPAIRS, LUBRICATION AND MAINTENANCE OUTLINED IN IMPLEMENT MAINTENANCE SECTION:**

- **INSPECT** for loose fasteners, worn or broken parts, leaky or loose fittings, missing or broken cotter keys and washers on pins, and all moving parts for wear.
- **REPLACE** any worn or broken parts with authorized service parts.
- **LUBRICATE** unit as specified by lubrication schedule.
- **NEVER** lubricate, adjust or remove material while it is running or in motion.
- **TORQUE** all bolts and nuts as specified.

**BLADE INSPECTION:**

- **REPLACE** bent, damage, cracked or broken blades immediately with new blades.
- **AVOID** blade failures and thrown broken blades. **DO NOT** straighten, weld, or weld hard-facing blades.

**SAFETY SHIELDS, GUARDS AND SAFETY DEVICES INSPECTION:**

- **KEEP** all Deflectors, Chain Guards, Steel Guards, Gearbox Shields, and PTO integral shields, Bands, Side Skirts and Skid Shoes in place and in good condition.
- **REPLACE** any missing, broken or worn safety shields, guards and safety devices.

### WARNING

Operating, servicing and maintaining this equipment can expose you to chemicals including gasoline, diesel fuel, lubricants, petroleum products, engine exhaust, carbon monoxide, and phthalates, which are known to the State of California to cause cancer and birth defects or other reproductive harm. To minimize exposure, avoid breathing exhaust, do not idle the engine except as necessary, service your vehicle in a well-ventilated area and wear gloves or wash your hands frequently when servicing your vehicle. Battery posts, terminals and related accessories contain lead and lead compounds, chemicals known to the state of California to cause cancer, birth defects or other reproductive harm. For more information go to www.P65Warnings.ca.gov. This website, operated by California's Office of Environmental Health Hazard Assessment, provides information about these chemicals and how individuals may be exposed to them.

MAINTENANCE

PARTS INFORMATION
Bush Hog mowers use balanced and matched system components for blade carriers, blades, cuttershafts, knives, knife hangers, rollers, drivetrain components, and bearings. These parts are made and tested to Bush Hog specifications. Non-genuine "will fit" parts do not consistently meet these specifications. The use of "will fit" parts may reduce mower performance, void warranties, and present a safety hazard. Use genuine Bush Hog mower parts for economy and safety. (SPBH-1)

SEE YOUR BUSH HOG DEALER

Before operating your Rotary Cutter, make sure it is properly lubricated and thoroughly inspected. Only a minimum of time and effort is required to regularly lubricate and maintain this machine to provide long life and trouble free operation.

WARNING Always disengage the PTO before raising the Rotary Cutter for transporting or making adjustments.
SQ84T LUBE POINTS

Lubrication
Do not let excess grease collect on or around parts, particularly when operating in sandy areas. The illustrations below shows lubrication points. The chart gives the frequency of lubrication in hours, based on normal operating conditions. Severe or unusual conditions may require more frequent lubrication. Use Multi-Purpose Gear Oil when required in Gearbox. Use N.L.G.I #2 grease for all locations designated with grease gun. Be sure to clean the fitting thoroughly before using grease gun. Failure to maintain proper lubrication will result in damage to U-joints, gearbox, and/or driveshaft.

Driveline
U-Joints .............................................8 Hours .........................N.L.G.I #2 Grease
Telescoping Tube ..............................8 Hours .........................N.L.G.I #2 Grease
Shield Bearings .................................8 Hours .........................N.L.G.I #2 Grease

Gearbox (Check Every).....................8 Hours ..............................EP80W-90 Gear Oil

Tailwheel
Wheel Hubs.......................................40 Hours .......................N.L.G.I #2 Grease
Axle Pivots .......................................8 Hours .........................N.L.G.I #2 Grease
GEARBOX

NOTE: Make sure mower is level when checking oil in the gearbox. Gearbox capacity is 3 quarts.

Oil level should be checked every 8 hours of operation and if oil is needed it should be added to the proper level.

To check the oil level in both the gearboxes remove the check plug on the side of the gearbox. The oil should be level with the Check Plug hole. If the oil is not at this level, remove the Vent Plug and add EP80W-90 gear oil until it comes out the check plug hole (Do Not fill past this point). Replace the Check Plug and the Vent Plug.

If adding oil to a dry gearbox allow time for the oil to fill the lower portion of the gearbox and check to see if additional oil is required to bring oil up to the proper level.

Do not overfill the gearbox!

NOTE: Overfilling of Gearbox will cause pressure to build up and cause Grease Seals to leak.

TAIL WHEEL ASSEMBLY

Tail Wheel Bearings are packed at the factory with heavy-duty bearing grease. Grease Fittings are provided in the Wheel Hub and Tail Wheel Beam. Grease after 8 hours of use.
MAINTENANCE

BLADE SERVICING

Inspect blades before each use to determine that they are properly installed and in good condition. Replace any blade that is bent, excessively nicked, worn, or has any other damage. Small nicks can be ground out when sharpening.

**WARNING**

Use only original equipment blades on this cutter. They are made of special heat-treated alloy steel. Substitute blades may not meet specifications and may fail in a hazardous manner that could cause injury.

**DANGER**

Replace bent or broken blade with new blades. NEVER ATTEMPT TO STRAIGHTEN OR WELD ON BLADES SINCE THIS WILL LIKELY CRACK OR OTHERWISE DAMAGE THE BLADE WITH SUBSEQUENT FAILURE AND POSSIBLE SERIOUS INJURY FROM THROWN BLADES. (SGM-10)

- Manually wiggle the blade carriers to check for any looseness.
- Retighten any loose parts.
- Recheck torque every 50 hours.

**Important**

Operating with loose blade hardware will damage the blade holder and blades. Whenever the blades have been removed or replaced, the hardware must be retightened after the first eight hours of operation. On new units check blade hardware and the blade nut torque after first 8 hours.

**Important**

Operating with loose blade holder will damage the blade holder and output shaft, two initial tightenings are required. Retighten after one hour and again after the day of operation. In severe cutting conditions or commercial use, a daily inspection is required.

**Important**

To help prevent structural damage caused by loose hardware, tighten gear case hardware as specified. Check torque after first 8 hours of use and every 50 hours thereafter.

**NOTE:** Correct Blade Rotation is counter-clockwise viewed from the top.

**DANGER**

Inspect Blades daily for normal wear. If Blades have a notch worn into the leading worn into the leading edge at the lower bend more than 1/2" DEEP (due to running in gravel and/or the ground), REPLACE BOTH BLADES ON THAT CARRIER IMMEDIATELY. Failure to replace such abnormally worn blades may lead to catastrophic failure of the blade and ejection of the broken part with tremendous force which may cause bodily injury or death.

**NOTE:** Replace Blades in pairs after no more than 1/2" notch wear.

- Original Blade Edge
- 1/2" Maximum

Mnt-R-0034
MAINTENANCE

BLADE REMOVAL
Remove lockwasher and nut from blade bolt through inspection hole in deck of mower near the gearbox to remove blades for sharpening or replacement. See Figure below. Always replace lockwasher and nut when replacing blade bolt. When installing blades be sure and check blade bolt pivot diameter for wear. Replace bolt if worn more than 1/4 inch at any point. Tighten nut to 600 ft. lbs.

BLADE SHARPENING
When sharpening blades, grind each blade the same amount to maintain balance. Follow original sharpening pattern as shown in Figure Mnt-R-0008. Always sharpen blades by grinding. Always sharpen both blades at same time to maintain balance. The difference in blade weights should not exceed 1 ounce. Unbalanced blades will cause excessive vibration which can damage gear box bearings. Vibration may also cause structural cracks in cutter housing. DO NOT heat and pound out edge. Do not sharpen blade to a razor edge, but leave a 1/16" blunt edge. Do not sharpen back side of blade.

Important

WARNING
Avoid personal injury. Always block the cutter up to prevent if from falling when the blades and/ or carrier are being serviced.
BLADE CARRIER REMOVAL

Remove cotter pin and loosen slotted nut on gearbox shaft. Loosen but do not remove the nut until the blade carrier is loosened. Use a suitable 2 jaw gear puller to pull carrier off tapered gearbox shaft. If gear puller is not available use long bar inserted through blade bolt access hole with end against rotor bar. Strike opposite end of bar with sledge hammer. Rotate blade carrier 180 degrees and repeat process until carrier breaks loose.

BLADE CARRIER INSTALLATION

The SQ84T is a Dual Spindle machine with two blade carriers which have overlapping blade travel circles. The carriers MUST be timed to avoid the blades from striking each other during operation.

When replacing the blade carriers follow the illustration below for proper placement.

Clean the splines on both the blade carrier and output shaft. Position carrier on the gearbox output shaft and install special washer nut.

Tighten nut holding blade carrier to minimum 450 ft. pounds, strike the carrier near the hub several times with a heavy hammer to seat the hub. Use a suitable spacer over the nut to prevent damage to the nut and threads. Retighten the nut to 450 ft. pounds. Install cotter pin and spread.

Operating the mower with a loose blade pan or holder can damage the taper connection on the gearbox output shaft. To ensure proper seating between the blade holder and output shaft, check and tighten the retaining nut after the first day of operation. Recheck the blade carrier attachment each morning before operating. Grasp the carrier firmly with both hands and try to push and pull the carrier with one hand while pulling and pushing with the other hand to try to rock or oscillate the blade carrier. If the carrier is loose, retighten the retaining nut before operating the mower.

Always recheck gearbox output shaft slotted blade carrier retaining nut torque after a few hours operation.

Avoid personal injury. Do not work under cutter without support blocks to keep frame from falling.
SLIP CLUTCH OPERATIONAL CHECK

**NOTE:** After implement has been stored for 30 days or more, perform the following operational check:

1. Loosen eight nuts retaining clutch springs 1/3 turn or until spring can be turned with fingers.
2. With tractor at idle speed, engage tractor PTO drive for 2-3 seconds. Clutch should lip without turning blades. If clutch does not slip, contact your authorized Bush Hog dealer.
3. Retighten nuts to within 1/64" of original position. Initial spring length is shown in Figure Below.

**WARNING**

Overtightening spring nuts may cause damage to implement and/or tractor due to incorrect slip clutch torque setting. Always follow the proper adjustment procedure.

---

SLIP CLUTCH ADJUSTMENT

The slip clutch is factory present to the correct torque for protecting implement and tractor. Periodic adjustment is recommended. Should adjustment be needed, first check to be sure all spring lengths are the same. Initial spring length is shown in Figure Above. If necessary, adjust nut on any spring that is unequal. Adjust all eight spring retaining nuts 1/3 of a turn (2 flats on a nut) and check clutch slippage. If further adjustment is necessary, do so in 1/3 turn increments. Adjust only to provide sufficient torque to prevent slippage under normal conditions. Occasional slippage is normal for driveline protection. If satisfactory results cannot be obtained, consult your Bush Hog dealer.

**Important**

Do not overtighten nut and cause spring to become solid as this will cause shaft to fail.

**DANGER**

All Safety Shields, Guards and Safety devices including (but not limited to) - the Deflectors, Chain Guards, Steel Guards, Gearbox Shields, PTO integral shields, and Retractable Door Shields should be used and maintained in good working condition. All safety devices should be inspected carefully at least daily for missing or broken components. Missing, broken, or worn items must be replaced at once to reduce the possibility of injury or death from thrown objects, entanglement, or blade contact. (SGM-3)
CROSS SHAFT REMOVAL and REPLACEMENT

Removal: It will be necessary to disassemble the flexible coupling in order to remove the Cross shaft assembly. During re-assembly it is critical to maintain the blade timing as it was prior to disassembly. Before any disassembly starts make alignment marks as indicated in the illustration below. This will aid in placing the blade carriers in the proper timing during re-assembly of the Cross Shaft to the machine.

DISASSEMBLY:

1. Remove and retain the six M16 x 2 x 90 bolts and M16 x 2 self locking nuts.
2. Remove the 24 Large Flatwashers.
3. Remove the two rubber disk and 12 coupler bushings (located in the hole of the rubber disk).
4. Remove the 3/8” x 1” setscrew and Jamnut attaching the yoke to the input shaft on the outboard gearbox.
5. Slide the long yoke and tube back against the shield bracket on the input gearbox.
6. Slide the short yoke off the input shaft of the outboard gearbox.
7. Slide the long yoke and tube off the input gearbox shaft.

RE-ASSEMBLY

1. Slide the long yoke and tube onto the input gearbox shaft aligning the marks.
2. Slide the short yoke onto the input shaft of the outboard gearbox aligning the marks.
3. Place three of the M16 x 2 x 90 bolts through the yoke of the long yoke and tube. Place one large flatwasher to the inside of the yoke opposite the bolt head. Install one rubber disk with bushings on the bolt. Install 2 large flatwashers on each of the bolts.
4. Place three of the M16 x 2 x 90 bolts through the yoke of the short yoke. Place one large flatwasher to the inside of the yoke opposite the bolt head. Install one rubber disk with bushings on the bolt.
5. Slide the short yoke and the yoke and tube together making sure all the alignment marks are aligned.
6. Place a large flatwasher to the threaded end of the bolts through the yokes and install the self locking nuts. Torque to 50 ft. lbs.
7. IMPORTANT: Slide the assembly to align the hole for the 3/8” x 1” setscrew and jamnut until it aligns with the groove in the shaft of the outboard gearbox. Place the setscrew in the hole and tighten until it bottoms out in the groove on the shaft. Tighten the jamnut against the yoke surface.
8. Check the blade carriers to be sure they are 90º to each other.
STORAGE

Your rotary cutter represents an investment from which you should get the greatest possible benefit. Therefore, when the season is over, the cutter should be thoroughly checked and prepared for storage so that a minimum amount of work will be required to put it back into operation for the next season. The following are suggested storage procedures:

1. Thoroughly clean the cutter.
2. Lubricate the cutter as covered in Maintenance Section.
3. Tighten all bolts and pins to the recommended torque.
4. Check the cutter for worn or damaged parts. Make replacements immediately.
5. Place driveline in storage position resting on bracket.
6. Store the cutter in a clean, dry place with the cutter housing resting on blocks.
7. Use spray touch-up enamel where necessary to prevent rust and maintain the appearance of the cutter.
PROPER TORQUE FOR FASTENERS

The chart lists the correct tightening torque for fasteners. When bolts are to be tightened or replaced, refer to this chart to determine the grade of bolts and the proper torque except when specific torque values are assigned in manual text.

RECOMMENDED TORQUE IN FOOT POUNDS UNLESS OTHERWISE STATED IN THE MANUAL*

NOTE: These values apply to fasteners as received from supplier, dry or when lubricated with normal engine oil. They do not apply if special graphited or molydisulphide greases or other extreme pressure lubricants are used. This applies to both UNF fine and UNC coarse threads.

### TORQUE SPECIFICATIONS

Proper torque for American fasteners used on Bush Hog equipment. Recommended Torque in Foot Pounds (Newton Meters).*

Securidad
Las cortadoras BUSH HOG usan balancinados y componentes de sistema seleccionados para los portadores de cuchillas, cuchillas, eje de cortar, navajas, suspeniones de navajas, los rodillos, los componentes de línea motriz, y cojinetes. Estas partes son echas y probadas a la especificaciones de BUSH HOG. Partes que no son auténticas no regularmente llegan con estas especificaciones. El uso de partes que no son auténticas puede reducir el funcionamiento de la cortadora, anular garantías, y presentar un peligro de seguridad. Use partes de cortadora auténticas de BUSH HOG por economía y seguridad.

NOTA: Si necesita un manual completamente en español por favor de ponerse en contacto a:
Translations, dirección 1502 E. Walnut Street Seguin, TX 78155; Fax: (830) 372-9529
SECCIÓN DE SEGURIDAD 1-15

MANTENGA LOS IMPLEMENTOS EN BUENAS CONDICIONES DE funcionamiento, A TRAVÉS DE UN SERVICIO, REPARACIÓN O MANTENIMIENTO APROPIADO.

REALICE LAS TAREAS DE SERVICIO, REPARACIÓN, LUBRICACIÓN Y MANTENIMIENTO QUE SE DESCRIBEN EN LA SECCIÓN DE MANTENIMIENTO DEL IMPLEMENTO:

- INSPECCIONE el implemento para detectar sujetos sueltos, partes gastadas o rotas, ajustes sueltos o con filtraciones, que los pasadores tengan chavetas y arandelas, y las partes móviles para detectar el desgaste.

- REEMPLACE todas las partes gastadas o rotas con repuestos autorizados.

- LUBRÍQUE la unidad tal como se especifica en el cronograma de lubricación.

- NUNCA lubrique, ajuste o quite material mientras el equipo está en funcionamiento o movimiento.

- AJUSTE todas las tuercas y pernos tal como se especifica.

- INSPECCIÓN DE CUCHILLAS:
  - REEMPLACE las cuchillas dobladas, dañadas, agrietadas o rotas inmediatamente por cuchillas nuevas.
  - EVITE fallas de las cuchillas y que vuelen trozos de cuchillas. NO enderece, suelde o solda con superficies rígidas.

- INSPECCIÓN DE PROTECTORES DE SEGURIDAD, GUARDAS Y DISPOSITIVOS DE SEGURIDAD:
  - MANTENGA en su lugar y en buen estado todos los deflectores, protectores de pióndora, protectores de acero, protectores de acero, cubiertas de caja de engranajes, cubiertas integrales de PTO, bandas, faldones laterales y zapatas antideslizantes.
  - REEMPLACE cualquier protector, guardia o dispositivo de seguridad fallante, roto o gastado.

- DESCríBANSE LAS TAREAS DE SERVICIO, REPARACIÓN, LUBRICACIÓN Y MANTENIMIENTO QUE SE DESCRIBEN EN LA SECCIÓN DE MANTENIMIENTO DEL IMPLEMENTO.

- MANTEenga LOS IMPLEMENTOS EN BUENAS CONDICIONES DE funcionamiento, A TRAVÉS DE UN SERVICIO, REPARACIÓN O MANTENIMIENTO APROPIADO.

- OPERE el implemento de una manera que evite exposiciones innecesarias a la exposición del escape del motor y que evite exposiciones innecesarias a la exposición del escape.

- Evite el contacto con los postes de la batería, los cables y los terminales, que contienen plomo y productos químicos que en el estado de California son conocidos por causar cáncer, defectos de nacimiento y otros daños reproductivos.

ADVERTENCIA:

Este producto contiene plomo y otros compuestos químicos, que en el estado de California se sabe que causan cáncer, defectos de nacimiento y otros defectos reproductivos. Para reducir su exposición a estos compuestos, use equipo de protección personal e hágase limpiar regularmente por un profesional.
Sección de Seguridad 1-14

Seguridad

Riesgos con el mantenimiento del implemento

Se recomienda que los componentes de la torre de operaciones sean revisados y limpiados regularmente. 

NO SUÈLTE

NO Modifique o altere el implemento. Las reparaciones o componentes nuevos deben ser realizados por personal capacitado y autorizado. 

SIÈGA

USÉ Lámparas de seguridad durante el funcionamiento del implemento. 

ASEGURASE

SEGURO DE LA CARGA 

USE un descargador o guías de equipo para asegurar que el implemento esté seguro durante el funcionamiento. 

DETAÑA 

Seguridad de los componentes y partes de la torre de operaciones. 

SUITE FRIENPETE O TRAPEZ EN POSICION ELEVADE 

Luego de los componentes del implemento, asegúrese de que estén correctamente instalados. 

EVITE EL CONTACTO

seguridad con el mantenimiento del implemento

Señale el equipo de seguridad de las partes móviles del implemento. 

SEGURIDAD

Señale el equipo de seguridad de las partes móviles del implemento. 

GUARDE EL MOTOR Y EL TRAVÉS DE SERVICIO, REPARACION Y MANTENIMIENTO DEL IMPLEMENTO

MANTENIMIENTO APROPIADO

FUCIONAMIENTO A TRAVÉS DE UN SERVICIO, REPARACION O MANTENIMIENTO LOS IMPLEMENTOS EN BUENAS CONDICIONES

...cables o partes móviles y quité la lâmpara de seguridad de la torre. 

APAGUE EL MOTOR Y EL TRAVÉS DE SERVICIO, REPARACION Y MANTENIMIENTO DEL IMPLEMENTO

Riesgos con el mantenimiento del implemento

Seguridad
Seguridad

RIESGOS EN TRANSPORTE PARA EVITAR LESIONES GRAVES O LA MUERTE AL REMOLCAR O TRANSPORTAR EQUIPOS:

- MANTenga la velocidad de transporte POR DEBAJO DE 20 millas por hora para mantener el control del equipo.
- REDuza la velocidad en terreno inclinado, en las curvas y en condiciones de remolque desfavorables.
- NO REMOLque camiones u otros vehículos.
- USE un tractor de tamaño adecuado y equipado en función del equipo de remolque.
- SIGA todas las reglamentaciones de tránsito locales.

REQUISITOS DEL TRACTOR PARA REMOLCAR O TRANSPORTAR IMPLEMENTOS:

- SÓLO TRANSPORte en el tractor con el mecanismo ROPS (antivuelco) en posición elevada.
- USE un tractor de tamaño adecuado y equipado que supere el peso del implemento en al menos un 20%.
- MANTenga el 20% del peso del tractor en las ruedas frontales para mantener la dirección en forma segura.

ANTES DE TRANSPORTAR O REMOLCAR EL IMPLEMENTO:

INSPECCIÓN DEL TRACTOR:

- VERIFIque la dirección y los frenos para asegurarse el correcto funcionamiento y las condiciones adecuadas.
- VERIFIque llevar el Aviso de SMV, los reflectores y las luces de advertencia para la adecuada operación y visibilidad detrás de la unidad.
- VERIFIque que no haya impedimentos a la visión mientras conduce, en el tractor, la cabina o el implemento, sentado en el asiento del tractor.
- AJUSTE su posición de conducción, los espejos y el transporte del implemento para tener una visión clara para condiciones de conducción y tránsito.

PREPARE EL IMPLEMENTO PARA EL TRANSPORTE O EL REMOLQUE:

- DESAPLIque el PTO.
- ELEve la cortadora.
- QUITe todo material cortado que se accumule en la plataforma de la cortadora.

CORTADORA AL REMOLQUE-INSTALE TRABAS DE TRANSPORTE Y CADENA DE SEGURIDAD:

- INSTALE los paradores o pernos de transporte en el cilindro de eje central.
- AJUSTE LA CADENA DE SEGURIDAD del implemento al tractor y del tractor al implemento.

DETERMINAR LAS CARACTERÍSTICAS DE DETENCIÓN DEL TRACTOR Y EL IMPLEMENTO PARA EL TRANSPORTE O REMOLQUE:

PRUEBAS DE FRENADO:

- FRENE a velocidades en aumento.
- OBSERVE las distancias de DETENCIÓN con el aumento de velocidad.
- DETERMINE la velocidad de transporte máxima que no supere las 20 millas por hora.

DETERMINAR LA VELOCIDAD MÁXIMA ANTES DE OPERAR EN CARRETERAS O TERRINO:

PONEA A PRUEBA el equipo aumentando lentamente la velocidad en las curvas para determinar si se puede operar a mayores velocidades.

AL REMOLCAR O TRANSPORTAR EL EQUIPO:

- SIEMPRE USE EL CINTURÓN DE SEGURIDAD al operar o transportar la cortadora.
- USE bajas velocidades para evitar el vuelco con el implemento elevado.
- USE bajas velocidades y dirección gradual en las curvas, colinas, o en superficies irregulares o poco uniformes, y en carreteras mojadas.
- ENCENDA LAS BALIZAS DE ADVERTENCIA del tractor.
- USE LA LAMINA DE SEGURIDAD de advertencia del operador de transporte en el lugar donde el equipo se encuentra.
### SEGURIDAD

**Sección de Seguridad 1-12**

- **Apague el motor** al cargar combustible. 
- **Limpie** todo residuo de hierro o residuo acumulado arededor de las líneas de conducción de la corriente, los cables de alto voltaje y el equipo eléctrico. 
- **No conduzca** sobre ríos, arroyos o embalses. 
- **Evite la formación de chispas** en no permitir que la flama del propano entre en contacto con objetos sólidos como metales o rocas. 
- **No fume** ni acerete fuego directo en la corriente a la escopeta. 
- **No opere** la corriente sobre un terreno empinado con escasa pendiente del balde. 
- **El terciar debe estar equipado con materiales de protección.**

---

**Riesgos Eléctricos y de Fuego**

**Seguridad**

- **Riesgos de Servicios de gas**: 
  - **No opere** la corriente en áreas donde existan gases. 
  - **Mantenga líneas libres** de obstrucciones. 
- **Riesgos de choque y explosión**: 
  - **Riesgos de Servicios de gas**: 
    - **No opere** en áreas donde existan gases. 
    - **Mantenga líneas libres** de obstrucciones.
SEGURIDAD

Sección de Seguridad 1-11

 Hacker:

- El fluido hidráulico puede causar quemaduras si es expuesto al impacto de los gases de escape.
- Mantenga las manos y los ojos lejos de las conexiones de alta presión.
- No use un papel o un paño para separar las piezas del sistema.
- Use siempre guantes de seguridad.

SISTEMA DE ALTA PRESIÓN

AL VERRADURAR LÍQUIDOS HIDRÁULICOS Y TRABAJAR CERCA DE LOS SISTEMAS HIDRÁULICOS:

- Las filtraciones de líquido de alta presión pueden ser visibles.
- Mantenga las manos lejos de la conexión incómoda.
- Lleve siempre la presión hidráulica en el sistema.
- Asegure la presión en el sistema.
- No opere el equipo con líquido de alta presión.

Para evitar lesiones graves o daños por penetración de fluidos:

- Use guantes de acarreo para detectar
- Explosión de alta presión
- Pérdida de alta presión

RIESGO DE FILTRACIÓN DE ACEITE HIDRÁULICO DE ALTA PRESIÓN

Seguridad
Sección de Seguridad 1-9

NO UTILICE UN ADAPTADOR DE PTO.

COMMUNICACIÓN CON EL DISTRIBUIDOR: Si la línea de conducción del implemento no coincide con el eje de la PTO, el implemento puede causar problemas de lubricación.
- Limpie las uniones de uniones con fines de lubricación.
- EL implemento debe estar correctamente instalado para asegurar un correcto ajuste.
- Si la línea de conducción no es correcta, puede causar problemas de lubricación. La línea de conducción debe estar alineada con el eje de la PTO y debe estar asegurada.
- Las líneas de conducción deben estar ajustadas correctamente.
- Verifique que la línea de conducción está correctamente alineada con el eje de la PTO y que está asegurada.

PARA EVITAR QUE LA LÍNEA DE CONDUCCIÓN SE ROMPA DURANTE LAS OPERACIONES:
- Siempre verifique los protegidos de los ingenieros. No debe haber protectores en la línea de conducción.
- Reemplace o repare los elementos de falla que sean detectados.
- No opere la máquina sin elementos de protección. Los elementos de protección deben estar montados correctamente.
- Mantenga los implementos libres de residuos, y asegúrese de que las líneas de conducción estén limpias.

PARA EVITAR LESIONES GRAVES O LA MUERTE POR ENREDOS AL OPERAR AL IMPLEMENTO:

- Protección de la PTO:
  - Los elementos de protección deben estar usados correctamente. Debe ser necesario el uso de estos elementos.
  - Examine todos los elementos de protección antes de operar.

- Mantenga las líneas de conducción libres de residuos, y asegúrese de que las líneas de conducción estén limpias.

RIESGO DE ENREDOS POR EL PTO

Seguridad
### Sección de Seguridad 1-8

**AL SUBIR Y BAJAR DEL TRACTOR:**
- Nunca lleve a otras personas en el tractor o implemento.
- Use radios y equipos en posición vertical.
- Mantenga el sistema ROPS instalado en el tractor.
- Use radios y equipos en posición vertical.
- Use radios y equipos en posición vertical.

**PARA EVITAR LESIONES GRAVES O LA MUERTE POR CALDA DEL TRACTOR O ARROPEDO:**

<table>
<thead>
<tr>
<th>Peligro</th>
<th>Peligro de Arropello</th>
<th>Peligro de Arropello</th>
</tr>
</thead>
<tbody>

<tr>
<th>Peligros de objetos lanzados por la cortadora</th>
<th>Inspecciona el área. Quite todos los objetos extraños que se hayan quedado en contacto con los objetos sólidos.</th>
</tr>
</thead>
<tbody>
<tr>
<td>No permita que las cuchillas entren en contacto con objetos sólidos.</td>
<td></td>
</tr>
</tbody>
</table>

**SEGUROS DE TRACTOR CERRADAS**

- **NO** exceda la capacidad de corte nominal de la cortadora. El corte debe ser en un terreno que no contenga vegetación.
- **USE CABINAS DE TRACTOR CERRADAS** cuando haya dos o más cortadoras operando en un mismo sector.
- **AJUSTE** la altura de corte para evitar el contacto con objetos sólidos como alambres, piedras, postes, cordones, guarniciones de fijación y estructuras de cemento.
- **DETENGA LA CORTADORA** en caso de que las cuchillas entren en contacto con objetos pesados, estructuras fijas, guarniciones de metal y estructuras de cemento.
- **LAS CUCHILLAS PUEDEN FALLAR** con el impacto y los objetos pueden ser arrojados a gran velocidad.
- **INSPECCIONE Y REEMPLACE** las cuchillas dañadas.
- **INSPECCIONE** la cortadora para detectar la fuente de la vibración.
- **VIBRACIÓN EXCESIVA**: DETENGA EL PTO y el MOTOR del tractor.
- **REEMPLACE PARTE DAÑADA** o las CUCHILLAS dobladas o dañadas.
### Seguridad

#### Sección de Seguridad 1-6

**Riesgo de Objetos Lanzados**

<table>
<thead>
<tr>
<th>Objetos sólidos contundentes con cañones peteados</th>
<th>Objetos extranos elevados contra el cuerpo</th>
<th>Objetos lanzados de alto riesgo</th>
<th>Contramedias que causan contrapresidentes</th>
</tr>
</thead>
</table>

**Medidas de Seguridad:**

1. Mantenga los tornillos de seguridad en posición de seguridad.
2. Pruebe la lata de corte 15 cm (6 pulgadas) como mínimo.
3. Inspeccione el área con cuidado antes de pasar la lata de corte.
4. Arroje artículos que pueden causar daños en movimiento en contratos con objetos peligrosos como.

**Advertencia:**

No intente abrir la tapa de la lata de corte a menos que esté en la posición de seguridad.

**Protección contra Objetos Arrojados de la Cortadora:**

- Use guantes de seguridad.
- Use equipo de protección personal.
- Mantenga a las personas a una distancia segura de la lata de corte.

**Mantenga la Lanza:**

- Use la lama de corte en el rango de 15 cm (6 pulgadas).
- Use la lama de corte en el rango de 30 cm (12 pulgadas).
- Use la lama de corte en el rango de 45 cm (18 pulgadas).

**Precauciones:**

- Use guantes de seguridad a la hora de manejar y almacenar la lata de corte.
- Use equipo de protección personal.
- Mantenga a las personas a una distancia segura de la lata de corte.

**Seguridad Adicional:**

- Use guantes de seguridad.
- Use equipo de protección personal.
- Mantenga a las personas a una distancia segura de la lata de corte.
AL DESCRIPCIÓN DE IMPLEMENTACIÓN:

DESENGANCHE Y ANCLAJE VERTICAL:

LA RUEDA DE ENGANCHO DE ALANAS O EL TRÁCTOR O EL APALASTRAMIENTO.

Para evitar la colocación de la alambrada sobre el tráctor o el implementos, se usa diferentes.

Advertencia:

PARA EVITAR LA CAÍDA O EL APALASTRAMIENTO DE NINGÚN POR EL EJECUTA:

NUNCA Debe utilizar un de un implemento en posición aplanada.

Desenganche de implemento. Trabajos de bloqueeles partes elevadas antes de alejar de equipo.

AL RESTO DE IMPLMENTOS Y TRACTORES:

BLOQUEE EN POSICION VERTICAL y si fuese con fijación de un equipo que no puede bloquear los equipos de equipo.

Sujele con Fijación Atracción en posición vertical. Tenga en cuenta que los equipos de equipo, que fijan con equipo.

Advertencia:

PARA EVITAR LA CAÍDA DE EJECUTA, el objetivo y el uso correcto de los componentes de los implementos.

Se elevan por los lugares de trabajo de mano a mano de los componentes de los implementos.

MANTenga LA TRANSMISIÓN TERSA a al pie de operaciones de equipo de equipo.

Pare la mano de los componentes de los implementos. 

Este el equipo solo de comando y el equipo del rueda con el cliente de equipo de equipo.

AL EVITAR O DESCONOCER EL IMPLEMTAMIENTO:

SÓLO OPERE con la cabeza de equipo de equipo y en condiciones de equipo de equipo.

MANTENGA el sistema ROPS fijado en posición vertical.

Corte:

Use herramientas que no sean sistema antivuelco (rops) y controles de seguridad para las operaciones de equipo.

Peligro:

Para evitar una lesión grave o la muerte por caída del tráctor o el apalastamiento.

Permítase con el control en la posición vertical.

Lesión de sistema ROPS.

Lesión por vuelcos.
Securidad

Para evitar lesiones graves o la muerte, siga las siguientes instrucciones:

1. USE CASCO Y SEGURIDAD GASES DE USE SEMPRE HACE OPERADOR DE SECURIDAD. LEA EL MANUAL DEL OPERADOR.
2. NUNCA CONSUMA ALCOHOL AÑADIDO O DE BEBER ALCOHOLICOS. AYUDA DE SEGURIDAD. EL CARDIO DE SECURIDAD. LEA EL MANUAL DEL OPERADOR.
3. NO USE PRUEBAS DE ALCOHOL EN EL ARMA DE SEGURIDAD. EL CARDIO DE SECURIDAD. LEA EL MANUAL DEL OPERADOR.
4. NO PERMITA QUE EL USUARIO NO SE GUARDE QUE LA OPERACIÓN MÁQUINA DE SEGURIDAD. EL CARDIO DE SECURIDAD. LEA EL MANUAL DEL OPERADOR.
5. NO CONSUMA PRUEBAS DE ALCOHOL EN EL ARMA DE SECURIDAD. EL CARDIO DE SECURIDAD. LEA EL MANUAL DEL OPERADOR.
6. USE UN OBJETIVO DE SEGURIDAD AL OPERAR EN CONDICIONES PROPIEDADES EN EL OBJETO CON EL EQUIPO DE SEGURIDAD. LEA EL MANUAL DEL OPERADOR.
7. MANTENGA LA ALBERTA A LA OPERACIÓN DE PROLONGADA PUEDE CAUSAR FALLAS. HAGA UNA PAUSA Y DESCANSE.
8. CONSULTE A UN MEDICO PARA CONSEGUIR LOS RECURSOS OPORTUNOS PARA LA MEDICACIÓN DE Ø O OBJETOS DE ACERO.
9. NO USE PRUEBAS DE ALCOHOL EN EL ARMA DE SEGURIDAD. EL CARDIO DE SECURIDAD. LEA EL MANUAL DEL OPERADOR.
10. LEA LOS INSTRUCCIONES DEL MANUAL DEL OPERADOR. EL IGUAL QUE LAS ADVERTENCIAS Y MENSUAL DE SEGURIDAD.
INSTRUCCIONES DE SEGURIDAD Y PRÁCTICAS GENERALES

El mejor operador es un operador cuidadoso. La seguridad es de importancia fundamental para el fabricante, el propietario y el operador. La mayoría de los accidentes se pueden evitar, siempre que se respeten las siguientes instrucciones. Los operadores por su cuenta tomarán medidas de seguridad para contribuir a la protección de la maquinaria y a la seguridad de la persona que usa o manipula el equipo. Lea con atención estos mensajes de seguridad antes de ensamblar, operar o reparar este equipo. El equipo sólo debe ser operado por personas que hayan leído el manual, comprendido y cumplido con el mismo.

ATENCIÓN: MANTÉNGASE ALERTA! SU SEGURIDAD ESTÁ EN JUEGO! El Símbolo y la Señal de Peligro tienen el objetivo de advertir al propietario/operador sobre un riesgo inminente y el grado de lesión que se puede producir al operar este equipo.

Adopte todas las medidas habituales para trabajar en forma segura y sobre todo, recuerde que la seguridad depende de Ud. ESTE MANUAL PUEDE OCASIONAR LA MUERTE O UNA LESIÓN GRAVE.

Indica una situación peligrosa inminente que, de no ser evitada, ocasionará la muerte o una lesión grave.

Indica una situación peligrosa inminente que, de no ser evitada, podría ocasionar la muerte o una lesión menor.

LEA CON ATENCIÓN Y RESPECTE los siguientes Mensajes de Seguridad. Si no se siguen cuidadosamente los Mensajes de Seguridad, pueden sufrir lesiones graves. Los pictogramas se utilizan a lo largo de este manual para ayudar a que su atención visual se centre en los problemas de seguridad.

NOTA: Si desea obtener una traducción de esta sección de seguridad en alguno de los siguientes idiomas, comuníquese con Translations, a la dirección 1022 E. Walnut Street, Seguin, TX 78155, Fax: (830) 372-9529. La Sección de Seguridad está disponible en español, portugués, francés, alemán, uruguayo, y más sin costo.
Sección de Seguridad
**Instrucciones de operaciones antes de la entrega del DISTRIBUIDOR al CLIENTE**

El distribuidor deberá informar al comprador de este producto las condiciones, disposiciones y procedimientos de garantía aplicables; informar la responsabilidad del comprador de capacitar a sus operadores para la operación segura; revisar el contenido del Manual del Operador, incluido el equipo de seguridad, la operación segura y el mantenimiento; y revisar las Señales de Seguridad que se encuentran en el implemento (y en el tractor, de ser posible).

- **IMPLEMENTOS:** He explicado que los deflectores, protectores de cadena o faldones sólidos se deben mantener en buenas condiciones de reparación y se deben instalar, excepto en zonas donde personas, vehículos, ganado u otros bienes no corran peligro por objetos arrojados, y en los casos en que dichos equipos de seguridad impedirían un desempeño razonable de la cortadora en su tarea asignada.

- **LÍNEAS DE CONDUCCIÓN:** Me he asegurado de que todos los protectores de líneas de conducción, de caja de engranajes y otros están en buenas condiciones de reparación y firmemente sujetados para prevenir lesiones por enredo u objetos arrojados.

- **MÁQUINAS HIDRÁULICAS:** He explicado la necesidad de usar aceite hidráulico limpio, cambiar los filtros según las instrucciones, detener filtraciones, prevenir daños por operar con aceite demasiado caliente, cuidar las mangueras, usar mangueras del tipo correcto, mantener la presión operativa especificada y prevenir el posible riesgo de que el aceite penetre en la piel.

- **IMPLEMENTOS PLEGABLES:** He explicado que no es posible proteger contra objetos arrojados cuando el cabezal está elevado del suelo y que el operador es responsable de verificar que no existan personas en las inmediaciones. He explicado que el brazo o cabezal de cortadora elevado puede entrar en contacto con obstrucciones elevados y dañar cables y líneas telefónicas, y posiblemente causar lesiones. He explicado que el brazo o cabezal extendido, o el brazo retraído, puede entrar en contacto con cables de alimentación y causar lesiones o la muerte por electrocución, y que el operador es responsable de evitar dichos riesgos.

Bush Hog está diseñado a suministrar un (1) Video de Prácticas de
A fin de reducir la tasa de accidentes y mejorar la operación segura de las cortadoras, Alamo Group Ag Division se ha asociado con otros fabricantes de la industria para desarrollar el video y la guía de Prácticas de Seguridad para Cortadoras Industriales y Agrícolas AEM/FEMA.

El video explica a los operadores de tractores y cortadoras las prácticas seguras que deben adoptar cuando utilizan cortadoras industriales y agrícolas. Es importante que todos los operadores de cortadoras aprendan cómo operar sus equipos de corte y puedan reconocer los posibles peligros que pueden surgir al operar una cortadora. Este video, en conjunto con el manual del operador de la cortadora y los mensajes de advertencia que se encuentran en la cortadora, serán muy útiles para complementar este aprendizaje tan importante.

Es posible que su distribuidor autorizado de Bush Hog le haya mostrado este video y le haya entregado una copia en DVD cuando adquirió su cortadora. Si usted o algún operador de cortadora no vio el video: mire el video, lea este Manual del Operador, y complete la Guía del Video antes de operar su cortadora nueva. Si no comprende alguna de las instrucciones del video o del manual del operador, o si tiene alguna pregunta acerca de la operación segura, comuníquese con su proveedor de tractores o con su distribuidor o con Alamo Group Ag.

La información y material mencionado en la información anterior junto con el Manual de Operador pueden asistir en cumplir con los requisitos de OSHA para entrenamiento anual del operador. Los siguientes requisitos de entrenamiento se encuentran en el título 29, código de la PIEZA DE REQUISITOS DE ENTRENAMIENTO DEL OSHA.

El empleador debe dar a cada empleado que opere un tractor agrícola o un implemento en las prácticas de operación segura y el mantenimiento del equipo con el cual el empleado esté, o estará, implicado y de cualquier otra práctica dictada por el ambiente laboral.

Las prácticas de operación segura y el mantenimiento del equipo deben incluir:

- Entrenamiento inicial y por lo menos anualmente después de eso.
- Practicas de operación segura y el mantenimiento del equipo que el empleado esté, o estará, implicado y de cualquier otra práctica dictada por el ambiente laboral.
- Entrenamiento en el tractor agrícola en el que se le ha asignado el equivalente a un tractor agrícola AEM/FEMA.

Para recibir una copia del video en DVD, envíe un mensaje de correo electrónico a AEMVHSinfo@alamogroup.com o un fax al (830) 372-9529, o envíe por correo una copia rellenada del formulario que se encuentra al dorso de esta página a AEMVHS Video 1502 E Walnut Street, Seguin, TX 78155, y solicite la versión en DVD. Si desea recibir una copia del video en VHS, envíe un mensaje de correo electrónico a AEMVHSinfo@alamogroup.com o un fax al (830) 372-9529, o envíe por correo una copia rellenada del formulario que se encuentra al dorso de esta página a AEMVHS Video 1502 E Walnut Street, Seguin, TX 78155, y solicite la versión en VHS.

Indique su nombre, dirección postal, número de teléfono y modelo de cortadora que ha comprado.

El Rancho es donde el fin del camino comienza.
Al propietario/operador/distribuidor

Este Manual del Operador es una parte esencial de la operación segura de esta máquina y se debe mantener con la unidad siempre. El implemento incluye un porta manual donde se puede guardar el manual de manera adecuada. Si el manual se extravía o se daña, puede solicitar otra copia sin cargo a un distribuidor autorizado de Bush Hog o descargarlo del sitio web de Bush Hog (www.bushhog.com).

ANTES DE COMENZAR LEA, COMPRENDA y SIGA la información incluida en este manual, el Manual de Seguridad de la Cortadora AEM y el manual del operador del tractor para conocer cómo operar la máquina y realizar tareas de servicio correctamente. De lo contrario, podría sufrir lesiones u ocasionar lesiones a terceros.

Todos los implementos con partes móviles son potencialmente peligrosos. Cada esfuerzo ha sido hecho para asegurar que la máquina esté segura, pero los operadores deben evitar entrar en prácticas peligrosas y seguir las instrucciones escritas que son proporcionadas. El fabricante ha diseñado este implemento para ser usado con todos sus equipos de seguridad correctamente sujetados para minimizar la probabilidad de accidentes.

LA SEGURIDAD PRIMERO. Lea con atención la totalidad de la sección de seguridad de este manual antes de operar el equipo. No permita que nadie opere el equipo sin haber leído y comprendido la totalidad de este manual.

Comuníquese con el distribuidor si necesita explicación sobre alguna instrucción que no haya comprendido del todo.

Los cuidados que brinde a su Implemento Bush Hog determinarán en gran medida su satisfacción con el desempeño y la vida útil del equipo. Lea con atención y siga las instrucciones de este manual para comprender cabalmente su nuevo implemento, su uso previsto, y sus requisitos de servicio.

Todas las referencias que se hacen en este manual a derecha, izquierda, frontal, trasero, arriba y abajo corresponden a la perspectiva en el sentido del desplazamiento hacia delante con el implemento correctamente sujetado al tractor.

La información sobre repuestos se encuentra por separado en el Manual de Partes. Las cortadoras Bush Hog utilizan componentes del sistema equilibrados y coincidentes para porta cuchillas, cuchillas, ejes de corte, hojas, ganchos para hojas, rodillos, componentes de los engranajes, y cojinetes. Estas partes se fabrican y se prueban según las especificaciones de Bush Hog. Las partes compatibles no genuinas no siempre cumplen con estas especificaciones. El uso de partes no genuinas puede perjudicar el desempeño de la cortadora, anular la garantía y presentar un riesgo para la salud. Use partes genuinas Bush Hog para asegurar que el implemento alcance su máxima eficiencia y vida útil.

Para referencia futura, registre el número de modelo y el número de serie de Bush Hog que ha adquirido.
Este Manual del Operador es una parte esencial de la operación segura de esta máquina y se debe mantener con la unidad siempre. LEA, ENTENDA, y SIGA las instrucciones de Seguridad y Operación contenidas en este manual antes de operar el equipo. Importantes instrucciones y las instrucciones de seguridad se encuentran en el video de Seguridad de Video de Seguridad. Video de Seguridad.
